chemistry Elements of Synthesis Planning R. W. Hoffmann, 2009-01-07 Synthesis is at the core of organic chemistry. In order for compounds to be studied be it as drugs materials or because of their physical properties they have to be prepared often in multistep synthetic sequences. Thus the target compound is at the outset of synthesis planning. Synthesis involves creating the target compound from smaller readily available building blocks. Immediately questions arise: From which building blocks? In which sequence? By which reactions? Nature creates many highly complex natural products via reaction cascades in which an assortment of starting compounds present within the cell is transformed by specific for each target structure combinations of modular enzymes in specific sequences into the target compounds. 1, 2 To mimic this efficiency is the dream of an ideal synthesis. 2 However we are at present so far from achieving such a one pot operation that actual synthesis has to be achieved via a sequence of individual discrete steps. Thus we are left with the task of planning each synthesis individually in an optimal fashion. Synthesis planning must be conducted with regard for certain specifications some of which are due to the structure of the target molecule and some of which relate to external parameters such as costs, environmental compatibility or novelty. We will not consider these external aspects in this context. Planning of a synthesis is based on a pool of information regarding chemical reactions that can be executed reliably and in high chemical yield.

Enzyme Cascade Design and Modelling Selin Kara, Florian Rudroff, 2021-02-24 This book provides a comprehensive overview of the recent developments achieved in the field of chemo enzymatic cascades with topics spanning from design in vitro and in vivo to kinetic and process modelling as well as process control. Opportunities and challenges of building multi step chemo enzymatic reactions are discussed whereby the latter are critically assessed in each chapter and methods to ease the implementation are explored. Both multi enzymatic cascades and chemo enzymatic cascades are presented with the motivation of combining the strengths of these two worlds e.g. selectivity, activity and robustness not neglecting the obstacles and challenges of such endeavour. Furthermore the use of non conventional media for catalytic cascade reactions, recent achievements and potential for future developments in a technical environment are addressed.
