Organization And Decision Theory Recent Economic Thought:

Organization and Decision Theory Ira Horowitz, 2012-12-06 Ira Horowitz Depending upon one's perspective the need to choose among alternatives can be an unwelcome but unavoidable responsibility an exciting and challenging opportunity a run of the mill activity that one performs seemingly without thinking very much about it or perhaps something in between Your most recent selections from a restaurant menu from a set of jobs or job candidates or from a rent or buy or sell or lease option are cases in point Oftentimes we are involved in group decision processes such as the choice of a president wherein one group member's unwelcome responsibility is another's exciting opportunity Many of us that voted in the presidential elections of both 1956 and 1984 irrespective of political affiliation experienced both emotions others just pulled the lever or punched the card without thinking very much about it Arriving at either an individual or a group decision can sometimes be a time consuming torturous and traumatic process that results in a long regretted choice that could have been reached right off the bat On other occasions the just let's get it over with and get out of here solution to a long festering problem can yield rewards that are reaped for many 1 ORGANIZATION AND DECISION THEORY 2 years to come One way or another however individuals and organizations somehow manage to get the decision making job done even if they don't quite understand and often question just how this was accomplished

Information and Communication in Economics Robert E. Babe, 1993-11-30 Although there is a burgeoning interest among economists in information economics much of the literature adopts a reductionist conceptualization of information defining it exclusively as reduction in uncertainty exploring the implications of imperfect information on markets This neoclassical treatment obscures major interrelations between economic and communicatory processes Drawing on a range of distinguished scholarship from both the economic and communication studies disciplines Information and Communication in Economics explores the implications for economic analysis and our understanding of economic processes of employing a more complete conceptualization of information information as locus of power information as evolutionary agent and media systems as devices for control *American Science Manpower* National Science Foundation (U.S.), 1968 **Business Cycles in Economic Thought** Alain Alcouffe, Monika Poettinger, Bertram Schefold, 2017-01-06 Business Cycles in Economic Thought underlines how over the time span of two centuries economic thought interacted with cycles in a continuous renewal of theories and rethinking of policies whilst economic actions embedded themselves into past economic thought This book

argues that studying crises and periods of growth in different European countries will help to understand how different national political and cultural traditions influenced the complex interaction of economic cycles and economic theorizing The editors of this great volume bring together expert contributors consisting of economists historians of economic thought and historians of economics to analyse crises and theories of the nineteenth and the twentieth century This is alongside a comprehensive outlook on the most relevant advances of economic theory in France Germany and Italy as well as coverage of non European countries such as the United States Several of the highly prestigious Villa Vigoni Trilateral Conferences formed the background for the discussions in this book This volume is of great interest to students and academics who study history of economic thought political economy and macroeconomics *Global Social Economy: Development,, Work and Policy* John B. Davis,2009-09-10 This volume expands on the standard economic framework of global economy by looking at the way in which economic life is framed by society and social relationships and investigates how social values influence and help determine economic values Organizational Behavior for School Leadership Leslie S. continued to build on this groundwork provided by their master. During recent years there has been a great upsurge of discussion on technology innovations, technological regimes etc. from the dynamic perspective provided by Schumpeter (Dosi 1984, Rosegger 1985, Dosi et al 1988). Thus the search process for temporal extra profits has been stressed and has been used for modelling attempts. The wider institutional framework for technological change and innovation activity has also been strongly developed more recently. Hence emphasis has grown in the study of technological and industrial regimes, path dependency and the network approach developed recently that social relationships structure the opportunities and constraints that face firms and agents that for example carry out innovations (Snehota 1990).

Facing the Unexpected Ronald W. Perry, Michael K. Lindell, Kathleen J. Tierney, 2001-12-06. *Facing the Unexpected* presents the wealth of information derived from disasters around the world over the past 25 years. The authors explore how these findings can improve disaster programs, identify remaining research needs and discuss disaster within the broader context of sustainable development. How do different people think about disaster? Are we more likely to panic or to respond with altruism? Why are 110 people killed in a Valujet crash considered disaster victims while the 50 000 killed annually in traffic accidents in the U.S. are not? At the crossroads of social, cultural and economic factors, this book examines these and other compelling questions. The authors review the influences that shape the U.S. governmental system for disaster planning and response, the effectiveness of local emergency agencies and the level of professionalism in the field. They also compare technological versus natural disaster and examine the impact of technology on disaster programs.

Radical Economics Bruce Roberts, Susan Feiner, 2012-12-06. **The Economics of Saving** James H. Gapinski, 2013-03-09. This book began when a letter reached my desk in November 1989. Written by Warren Samuels, professor of economics at Michigan State University and editor for Kluwer Academic Publishers, the letter reviewed the philosophy behind Kluwer's series on recent economic thought and accordingly expressed interest in the controversies that surround contemporary topics in the discipline. It graciously went on to invite me to organize consonant with that philosophy a volume of chapters on saving. Soon thereafter I learned that the chapters were to be original compositions. I also learned that I would have substantial flexibility in structuring the volume and in recruiting contributors who logically would be authorities in the field. Succinctly, Samuels was inviting me to work with leading scholars in exploring the current controversies in saving, one of my favorite subjects. That invitation was simply too tempting to refuse. Preparation of the book's outline went smoothly. It was obvious that the statistics of saving should be covered along with the theories of saving. It was equally obvious that special issues must be addressed: Ricardian Equivalence, supply-side doctrine and economic development among others. These themes should be handled so as to bring out the ideological tensions in the profession and that criterion helped to shape the list of potential contributors. That is, both sides of a conflict should be represented and both should be given the same treatment.
