Organometallic Catalysts and Olefin Polymerization R. Blom,A. Follestad,E. Rytter,M. Tilset,M. Ystenes,2012-12-06 Catalysis is more art than science probably all of you have heard and even used this expression Whether it is true or not it alludes to the experience that new catalysts are hard to find and near impossible to predict Hard work and a lifetime of experience is invaluable However a keen mind might give insight into where to search but not necessarily about where to find the answers Historically quantum leaps have often arisen from serendipity we all know the story about the nickel contaminated reactor that triggered further research towards the first coordination catalyst for ethene polymerization Taking advantage of this event Karl Ziegler became the first chemist to earn both a Nobel prize and a fortune for the same invention A broken NMR tube helped Walter Kaminsky discover the effect of high concentrations of methylaluminoxanes as co catalysts for metallocenes When air reacted with the concentrated trimethyl aluminum solution sufficient amounts of methylaluminoxanes were formed and the lazy catalyst dormant in the NMR tube suddenly became sensationally active Ziegler and Kaminsky were lucky and had the genius needed to take advantage of their luck Stereoselective Polymerization with Single-Site Catalysts Lisa S. Baugh,Jo Ann M. Canich,2007-11-29 New synthetic techniques allow chemists to modify polymer microstructures more precisely than ever making it possible to design materials that meet increasingly demanding performance requirements Written and edited by experts in the field Stereoselective Polymerization with Single Site Catalysts reviews how the relative stereochemistry of Organometallic Catalysts and Olefin Polymerization R. Kanno,2005-01-12 Metallocene is a well known sandwich complex with two cyclopentadienyl ligands such as ferrocene Recently such metallocene compounds have been found to be very characteristic and they have become very important not only in the area of organic synthesis but also in polymerization in industry Metal complexes with one cyclopentadienyl ligand have also become popular as half sandwich complexes The number of researchers in the field of metallocenes has increased rapidly However the origin of the characteristic reactivity of metallocenes is not fully understood In this volume the chemistry of metal complexes with at least one cyclopentadienyl ligand is comprehensively covered by leading experts Reactions discussed here are i natural product synthesis ii catalytic asymmetric synthesis iii cyclization reactions iv catalytic reactions v polymerization reactions and v carbon carbon bond cleavage reactions The reader will have access to useful information about the current state of metallocene chemistry Quantum Inorganic Chemistry,2003 A discussion of recent developments in all aspects of computational chemistry Advances in Organometallic Chemistry Pedro J.
