Spinning Strings and Correlation Functions in the AdS/CFT Correspondence Juan Miguel Nieto, 2018-07-21 This book addresses several aspects of the integrable structure of the AdS CFT correspondence. In particular, it presents computations made on both sides of the AdS CFT correspondence at weak and at strong coupling. On the string theory side of the correspondence, the book focuses on the evaluation of the energy spectrum of closed string solutions moving in some deformed backgrounds that preserve integrability. On the gauge theory side, it explores various formal problems arising in the computation of two and three point functions by means of the Algebraic Bethe Ansatz and the Quantum Inverse Scattering method. The book features numerous results on integrability in the context of the AdS CFT correspondence. Self-contained and pedagogical, it includes general discussions and detailed presentations on the use of integrable systems techniques and their applications.

Sustainable Interdependent Networks II M. Hadi Amini, Kianoosh G. Boroojeni, S. S. Iyengar, Panos M. Pardalos, Frede Blaabjerg, Asad M. Madni, 2018-12-11 This book paves the way for researchers working on sustainable interdependent networks spread over the fields of computer science, electrical engineering, and smart infrastructures. It provides the readers with a comprehensive insight to understand, in depth, a big picture of smart cities as a thorough example of interdependent large scale networks in both theory and application aspects. The contributors specify the importance and position of the interdependent networks in the context of developing sustainable smart cities and provide a comprehensive investigation of recently developed optimization methods for large scale networks. There has been an emerging concern regarding the optimal operation of power and transportation networks. In the second volume of Sustainable Interdependent Networks book, we focus on the interdependencies of these two networks, optimization methods to deal with the computational complexity of them, and their role in future smart cities. We further investigate other networks such as communication networks that indirectly affect the operation of power and transportation networks. Our reliance on these networks as global platforms for sustainable development has led to the need for developing novel means to deal with arising issues. The considerable scale of such networks, due to the large number of buses in smart power grids and the increasing number of electric vehicles in transportation networks, brings a large variety of computational complexity and optimization challenges. Although the independent optimization of these networks leads to locally optimum operation points, there is an exigent need to move towards obtaining the globally optimum operation point of such networks while satisfying the constraints of each network properly. The book is suitable for senior undergraduate students, graduate students interested in research in multidisciplinary areas related to future sustainable networks, and the researchers working in the related areas. It also covers the application of interdependent networks, which makes it a perfect source of study for audience out of academia to obtain a general insight of interdependent networks.

Gravitational Measurements, Fundamental Metrology and Constants V. de Sabbata, Vitaly N. Melnikov, 2012-12-06 Proceedings of the NATO Advanced Study Institute

Erice Italy May 2 12 1987 **Original Scientific Papers / Wissenschaftliche Originalarbeiten** Walter Blum, Hans-Peter Dürr, Helmut Rechenberg, 2019-06-12 This is the final volume of Heisenberg's Collected Works It contains his papers on a nonlinear unified theory of elementary particles as well as his contribution to superconductivity and multiparticle production Especially interesting is the first group of papers which is split into two sections dealing with firstly the formulation of the famous nonlinear spinor equation and secondly its applications Among others the reader will find a thorough discussion of Heisenberg's collaboration with W Pauli on these matters Illuminating annotations to the various sections in this volume have been provided by H Koppe R Hagedorn and the editors **The Worldwide List of Alternative Theories and Critics** Jean de Climont, 2020-11-01 This Worldwide List of Alternative Theories and Critics only available in English language includes scientists involved in scientific fields The 2023 issue of this directory includes the scientists found in the Internet The scientists of the directory are only those involved in physics natural philosophy The list includes 9700 names of scientists doctors or diploma engineers for more than 70% Their position is shortly presented together with their proposed alternative theory when applicable There are nearly 3500 authors of such theories all amazingly very different from one another The main categories of theories are presented in an other book of Jean de Climont **THE ALTERNATIVE THEORIES Technical Report - Jet Propulsion Laboratory, California Institute of Technology** Jet Propulsion Laboratory (U.S.), 1962

Quantum Field Theory Of Point Particles And Strings Brian Hatfield, 2018-03-09 First Published in 2018 The emphasis of the book is calculational and most computations are presented in step by step detail The book is unique in that it develops all three representations of quantum field theory operator functional Schrödinger and path integral for point particles and strings In many cases identical results are worked out in each representation to emphasize the representation independent structures of quantum field theory **Origin of Symmetries** C. D. Froggatt, H. B. Nielsen, 1991 The development in our understanding of symmetry principles is reviewed Many symmetries such as charge conjugation parity and strangeness are no longer considered as fundamental but as natural consequences of a gauge field theory of strong and electromagnetic interactions Other symmetries arise naturally from physical models in some limiting situation such as for low energy or low mass Random dynamics and attempts to explain all symmetries even Lorentz invariance and gauge invariance without appealing to any fundamental invariance of the laws of nature are discussed A selection of original papers is reprinted **Critical Properties of [Greek Letter Phi]⁴-theories** Hagen Kleinert, Verena Schulte-Frohlinde, 2001 This book explains in detail how to perform perturbation expansions in quantum field theory to high orders and how to extract the critical properties of the theory from the resulting divergent power series These properties are calculated for various second order phase transitions of three dimensional systems with high accuracy in particular the critical exponents observable in experiments close to the phase transition Beginning with an introduction to critical phenomena this book develops the functional integral description of quantum field theories their perturbation expansions and a method for finding recursively

all Feynman diagrams to any order in the coupling strength Algebraic computer programs are supplied on accompanying World Wide Web pages The diagrams correspond to integrals in momentum space They are evaluated in 4 dimensions where they possess pole terms in ϵ The pole terms are collected into renormalization constants The theory of the renormalization group is used to find the critical scaling laws They contain critical exponents which are obtained from the renormalization constants in the form of power series These are divergent due to factorially growing expansion coefficients The evaluation requires resummation procedures which are performed in two ways 1 using traditional methods based on Padé and Borel transformations combined with analytic mappings 2 using modern variational perturbation theory where the results follow from a simple strong coupling formula As a crucial test of the accuracy of the methods the critical exponent governing the divergence of the specific heat of superfluid helium is shown to agree very well with the extremely precise experimental number found in the space shuttle orbiting the earth whose data are displayed on the cover of the book The ϕ^4 theories investigated in this book contain any number N of fields in an $O(N)$ symmetric interaction or in an interaction in which $O(N)$ symmetry is broken by a term of a cubic symmetry The crossover behavior between the different symmetries is investigated In addition alternative ways of obtaining critical exponents of ϕ^4 theories are sketched such as variational perturbation expansions in three rather than 4 dimensions and improved ratio tests in high temperature expansions of lattice models

Low-Dimensional Applications of Quantum Field Theory L. Baulieu, Vladimir Kazakov, Marco Picco, Paul

Windey, 2013-12-01 The Cargèse Summer School Low Dimensional Applications of Quantum Field Theory was held in July 1995 The School was dedicated to the memory of Claude Itzykson This session focused on the recent progress in quantum field theory in two dimensions with a particular emphasis on integrable models and applications of quantum field theory to condensed matter physics A large fraction of the school was also devoted to a detailed review of the exciting developments in four dimensional super symmetric Yang Mills theory The diversity of the topics presented constitute in our opinion one of the most attractive features of these proceedings Some contributions constitute a very thorough introduction to their subject matter and should be helpful to advanced students in the field while others present entirely new research not previously published and should be of considerable interest to the specialist There were in depth introductory lectures on the application of conformal field theory techniques to disordered systems on the quantum Hall effect on quantum integrable systems on the thermodynamic Bethe Ansatz and on the new developments in supersymmetric gauge theories The computation of the three point function of the Liouville model using conformal bootstrap methods was presented in detail

History of Original Ideas and Basic Discoveries in Particle Physics Harvey B. Newman, Thomas Ypsilantis, 2012-12-06 The International Conference on the History of Original Ideas and Basic Discoveries held at the Ettore Majorana Centre for Scientific Culture in Erice Sicily July 27 August 4 1994 brought together sixty of the leading scientists including many Nobel Laureates in high energy physics principal contributors in other fields of physics such as high T_c superconductivity particle
