

Chemical Bonding:

Chemical Bond → The attractive force which holds various constituents (atom, ion, etc) together in different chemical species is called chemical bond.

Cause of Chemical Bond:

To gain stability

- 1) Tendency to acquire minimum energy.
- 2) Tendency to acquire Noble gas configuration.

Attractive force

$N_1 + e_1$
 $N_2 + e_2$
 $N_1 + e_2$
 $N_2 + e_1$

Repulsive force

$e_1 + e_2$
 $N_1 + N_2$

* force of attraction

So, forms chemical Bond.

force of repulsion

Where attraction > repulsion

↑ attraction = energy ↓ = stability ↑

↓ attraction = energy ↑ = stability ↓

* force of attraction = force of repulsion (energy min)

Lectures On Chemical Bonding And Quantum Chemistry Sambhu N Datta, 2019-02-25 The concept of a chemical bond evolved from a variety of experimental observations It became useful to understand at times even predict the molecular structure reactivity and mechanism of chemical reactions Every aspect of the concept of bonding received a quantitative interpretation from the advent of quantum mechanics and its application to chemistry In Lectures on Chemical Bonding and Quantum Chemistry the reader will find a comprehensive discourse on the basic interpretation of the chemical bond as well as current understanding in terms of a dancing molecule that not only travels rotates and pulsates around an equilibrium molecular structure but also interacts and collides with other molecules thereby transferring linear and angular momentum characteristics and adjusting total energies

One will also find a thorough survey of quantum mechanical methodologies for calculation of molecular characteristics in specific states and their changes under spectroscopic transitions tunneling electron and proton transfer phenomena and so on Guides to more advanced levels of theory are also provided

The Chemical Bond Gernot Frenking, Sason Shaik, 2014-07-08 This is the perfect complement to *Chemical Bonding Across the Periodic Table* by the same editors who are two of the top scientists working on this topic each with extensive experience and important connections within the community The resulting book is a unique overview of the different approaches used for describing a chemical bond including molecular orbital based valence bond based ELF AIM and density functional based methods It takes into account the many developments that have taken place in the field over the past few decades due to the rapid advances in quantum chemical models and faster computers

Chemical Bonding and the Periodic Table, 2000 *Atomic Structure and Chemical Bonding, a Non-mathematical Introduction* Fritz Seel, 1963

Atoms, Chemical Bonds, and Bond Dissociation Energies Sándor Fliszár, 1994 Chemical bonds their intrinsic energies in ground state molecules and the energies required for their actual cleavage are the subject of this book The theory modelled after a description of valence electrons in isolated atoms explains how intrinsic bond energies depend on the amount of electronic charge carried by the bond forming atoms It also explains how bond dissociation depends on these charges While this theory vividly explains thermochemical stability future research could benefit from a better understanding of bond dissociation if we learn how the environment of a molecule affects its charges we also learn how it modifies bond dissociation in that molecule This essay is aimed at theoretical and physical organic chemists who are looking for new perspectives to old problems
