Airport Urbanism Max Hirsh, 2016-03-15 Thirty years ago few residents of Asian cities had ever been on a plane much less outside their home countries Today flying and flying abroad is commonplace How has this leap in cross border mobility affected the design and use of such cities And how is it accelerating broader socioeconomic and political changes in Asian societies In Airport Urbanism Max Hirsh undertakes an unprecedented study of airport infrastructure in five Asian cities Bangkok Hong Kong Shenzhen Kuala Lumpur and Singapore Through this lens he examines the exponential increase in international air traffic and its implications for the planning and design of the contemporary city By investigating the low cost informal and transborder transport systems used by new members of the flying public such as migrant workers retirees and Asia's emerging middle class he uncovers an architecture of incipient global mobility that has been inconspicuously inserted into places not typically associated with the infrastructure of international air travel Drawing on material gathered in restricted zones of airports and border control facilities Hirsh provides a fascinating up close view of the mechanics of cross border mobility Moreover his personal experience of growing up and living on three continents inflects his analyses with unique insight into the practicalities of international migration and into the mindset of people on the move

Airport Aura Lilia Mironov, 2020-02-26 Throughout

the 20th century and into the 21st the emergence of airports as gateways for their cities has turned into one of the most important architectural undertakings Ever since the first manned flight by the Brothers Orville and Wilbur Wright on December 17th 1903 utilitarian sheds next to landing strips on cow pastures evolved into a completely new building type over the next few decades into places of Modernism as envisioned by Le Corbusier and Frank Lloyd Wright who themselves never built an airport to eventually turn into icons of cultural identity progress and prosperity Many of these airports have become architectural branding devices of their respective cities regions and countries created by some of the most notable contemporary architects This interdisciplinary cultural study deals with the historical formation and transformation of the architectural typology of airports under the aspect of spatial theories This includes the shift from early spaces of transportation such as train stations the synesthetic effect of travel and mobility and the effects of material innovations on the development occupation and use of such spaces The changing uses from mere utilitarian transportation spaces to ones centered on the spectacular culture of late capitalism consumption and identity formation in a rapidly changing global culture are analyzed with examples both from architectural and philosophical points of view The future of airport architecture and design very much looks like the original idea of the Crystal Palace and Parisian Arcades to provide a stage for consumption social theatre and art exhibition

Metropolis, 1995 10 *Airports* Fentress Bradburn Architects Ltd, Sarah Palmer, 2006 Fentress Bradburn Architects is guided by the humanistic ideas that a building must work well for its users and must speak of and to its culture and community Given this purpose it was natural for Fentress Bradburn to gravitate toward airport architecture where large scale complex programs present some of the design field's most intriguing challenges

Airports Hugh Pearman, 2004 Since their emergence at the start of the 20th century airports have become one of the most distinctive and important of architectural building types Often used to symbolize progress freedom and trade they offer architects the chance to design on a grand scale At the beginning of the 21st century airports are experiencing a new and exciting renaissance as they adapt and evolve into a new type of building one that is complete adaptable and catering to a new range of demands As passengers are held in airports far longer than they used to be they have also now become destinations in their own right Airports celebrates the most important airport designs in the world Beginning with an exploration of the first structures of aviation and early designs such as the Berlin Tempelhof the book explores the key airports of the century up to the present day including Eero Saarinen's TWA Terminal in New York Renzo Piano's Kansai Airport and Norman Foster's Chek Lap Kok in Hong Kong

travel by air each day For most of us the experience of being in an airport is to be endured rather than appreciated with little thought for the quality of the architecture No matter how hard even the world s best architects have tried it is difficult to make a beautiful airport And yet such places do exist Cathedrals of the jet age that offer something of the transcendence of flight even in an era of mass travel and budget fares Here are twenty one of the most beautiful airports in the world The book features Wellington International Airport The Rock shaped like the dangerous cliffs of a local legend Kansai International Airport Renzo Piano s gigantic project built on three mountains of landfill Shenzhen International Airport a manta ray shaped terminal putting this booming region on the map Daocheng Yading Airport the world s highest civilian airport in the middle of the Tibetan mountains Chhatrapati Shijavi International Airport rising from the slums of Mumbai like a Mogul palace Queen Tamar Airport a playfully iconic modern airport nestled in the mountains of Georgia King Abdulaziz International Airport the gateway to Mecca resembling a Bedouin city of tents Pulkovo Airport mirroring the city of St Petersburg with bridges squares and art Berlin Tegel Airport ultramodernity 1970s style Copenhagen Airport an icon from the golden age of air travel Franz Josef Strau Airport sober and easy to negotiate Munich s model airport Paris Charles du Gaulle Airport the brutalist icon that launched the career of airport architect Paul Andreu London Stansted Airport Norman Foster s return to the golden age of air travel Lleida Alguaire Airport a relic of Catalonia s early 21st century building boom Madrid Barajas Airport Richard Rogers and Antonio Lamela s calm bamboo panelled Terminal 4 Marrakesh M nara Airport a blend of 21st century construction and traditional Moroccan design Santos Dumont Airport Rio de Janeiro s modernist masterpiece Carrasco International Airport Rafael Vi oly s design inspired by the sand dunes of his native Uruguay Malvinas Argentinas International Airport echoing the mountains and glaciers of Tierra del Fuego John F Kennedy International Airport Eero Saarinen s glamorous jet age TWA terminal Spaceport America a vision of the future in the New Mexico desert *A Social Journey Through Time and Space* Catharine Greenleaf Phelps,1997 *Fentress Bradburn Architects' Gateway to the West* Jessica Sommers,2000 Designed by Fentress Bradburn Architects the story of the construction of the Denver International Airport is a fascinating one Denver International Airport was the largest contract undertaken by the City and County of Denver and was the first airport built in a major US city since Dallas Fort Worth Its only other contemporary rival in terms of the scope of construction is the English Channel tunnel Gateway to the West takes the reader on a visual and narrative journey from the groundbreaking in 1989 through the opening in 1995 *Airports* John Walter Wood,1940 *Naked Airport* Alistair Gordon,2004-01 The first full cultural history of the ultimate modern structure the airport revealed as never before Since its origins in the muddy fields of flying machines the airport has arguably become one of the defining institutions of modern life In *Naked Airport* critic Alastair Gordon ranges from global geopolitics to action movies to the daily commute showing how airports have changed our sense of time distance style and even the way cities are built and business is done Gordon introduces the people who shaped this place of sudden transition pilots like Charles Lindberg architects like

Eero Saarinen politicians like Fiorello La Guardia and Hitler who built Berlin's Tempelhof as a showcase for Fascist power. He describes the airport's futuristic contributions such as credit cards in the form of fly now pay later schemes and he charts its shift in popular perception from glamorous to infuriating. Finally he analyzes the airport's function in war and peace, its gatekeeper role controlling immigration, its appeal to revolutionaries since the hijackings of the 1960s and its new frontline position in the struggle against terror. Compelling and accessible, *Naked Airport* is an original history of a long neglected yet central creation of modern reality and imagination.

Art of the Airport Tower Carolyn Russo, 2015-11-03 *Art of the Airport Tower* is a photographic journey to airports in the U.S. and around the world. This book, the companion volume to the Smithsonian National Air and Space Museum exhibition of the same name, explores 85 historic and contemporary airport towers through more than 100 fine art photographs by Carolyn Russo. Russo's photography makes these ordinary structures extraordinary; more than mere aviation artifacts, they are monumental abstractions, symbols of cultural expression and testimonies of technological change. The first impression travelers have when they reach a new city or country may well be the tower, as such it is often an embodiment of important symbols and values. For example, at the Stockholm Arlanda Airport in Sweden, two lookout points perch like birds at the top of the control tower in reference to two protective ravens from Nordic mythology. The Hangzhou Xiaoshan International Airport in China features wavy structures designed to look like scrolls of silk, delicately sheltering passengers below. Russo's striking photographs capture these features, and informative captions describe their architectural, cultural, and technological significance. An introduction by Smithsonian commercial aviation expert F. Robert van der Linden tells the history of airport towers to contextualize Russo's work. *Art of the Airport Tower* is a stunning book that brings a heightened awareness to the architectural beauty and historical significance of these structures.

The Airport Edward G. Blankenship, Jürgen Spingler, 1974 Historic Airports Bob Hawkins, Gabriele Lechner, Paul Smith, 2005 The realisation of mankind's age-old dream of flight is probably one of the collective adventures that best characterises the century we have just left: its greatest novelty. In the space of only three or four generations, aviation has conquered the entire planet and international airports have developed into sleepless cities. At the beginning of 1999, the European Commission sponsored an international project on aviation's architectural heritage, set up at the instigation of the French Ministry of Culture together with English Heritage and Landesdenkmalamt Berlin, the official heritage body of the German capital. The project's primary aim was to contribute to the better understanding and conservation of aviation architecture, focusing on three pilot sites: Berlin Tempelhof, Paris Le Bourget, and Liverpool Speke, all rare survivors from the late 1930s. An international network of expertise on aviation architecture grew out of three international workshops, the proceedings of which are presented here. Through contributions from historians, architects, development agencies, and airline companies, among others, the book examines how best to identify and preserve the sites worth keeping, the place of the airport in the 21st-century city, and the future of our historic airports.
