Organic Computing – A Paradigm Shift for Complex Systems Christian Müller-Schloer, Hartmut Schmeck, Theo Ungerer, 2011-04-29. Organic Computing has emerged as a challenging vision for future information processing systems. Its basis is the insight that we will increasingly be surrounded

by and depend on large collections of autonomous systems which are equipped with sensors and actuators aware of their environment communicating freely and organising themselves in order to perform actions and services required by the users. These networks of intelligent systems surrounding us open fascinating application areas and at the same time bear the problem of their controllability. Hence we have to construct such systems as robust, safe, flexible and trustworthy as possible. In particular, a strong orientation towards human needs as opposed to a pure implementation of the technologically possible seems absolutely central. The technical systems which can achieve these goals will have to exhibit life-like or organic properties. Organic Computing Systems adapt dynamically to their current environmental conditions. In order to cope with unexpected or undesired events, they are self-organising, self-configuring, self-optimising, self-healing, self-protecting, self-explaining and context-aware while offering complementary interfaces for higher-level directives with respect to the desired behaviour. First steps towards adaptive and self-organising computer systems are being undertaken. Adaptivity, reconfigurability, emergence of new properties and self-organisation are hot topics in a variety of research groups worldwide. This book summarises the results of a 6-year priority research program SPP of the German Research Foundation DFG addressing these fundamental challenges in the design of Organic Computing systems. It presents and discusses the theoretical foundations of Organic Computing, basic methods and tools, learning techniques used in this context, architectural patterns and many applications. The final outlook shows that in the meantime Organic Computing ideas have spawned a variety of promising new projects.

Navigating the New Retail Landscape Alan Treadgold, Jonathan

Reynolds, 2020-11-26 The global retail industry is in the early stages of an era of profound and unprecedented change. This book is intended to serve as a wide-ranging, robust and practical guide to leaders of enterprises tasked with both understanding and delivering success in the new landscape of retailing. Part 1 describes the major directions and drivers of change that define the new retail landscape. Accelerating changes in technology, the rise to international prominence of internet-enabled shoppers and the rapid emergence of entirely new retail enterprises and business models are combining to reshape the very fundamentals of the retail industry. No longer are shops central or even necessary to the business of retailing. No longer is choice for the shopper limited to the neighbourhood, town or even country in which they live. No longer is the act of retailing solely the preserve of traditional retail enterprises as internet-enabled businesses, technology, logistics, suppliers and financial services enterprises all seek direct relationships with the shopper. The new landscape of retailing is an unforgiving one. Success can be achieved more quickly than ever before, but failure is equally rapid. New opportunities are profound, but so too are the challenges. Part 2 of this book discusses the structures, skills and capabilities that retail enterprises and their leaders will need if they are to be successful. This second edition presents more than 25 detailed case studies of innovative and successful enterprises alongside more than one hundred smaller examples to illustrate the themes discussed. A new afterword also presents ten central areas business leaders must focus on in order to build organizational

Smart homes are intelligent environments that interact dynamically and respond readily in an adaptive manner to the needs of the occupants and changes in the ambient conditions. The realization of systems that support the smart homes concept requires integration of technologies from different fields. Among the challenges that the designers face is to make all the components of the system interact in a seamless, reliable, and secure manner. Another major challenge is to design the smart home in a way that takes into account the way humans live and interact. This latter aspect requires input from the humanities and social sciences fields. The need for input from diverse fields of knowledge reflects the multidisciplinary nature of the research and development effort required to realize smart homes that are acceptable to the general public. The applications that can be supported by a smart home are very wide, and their degree of sophistication depends on the underlying technology used. Some of the application areas include monitoring and control of appliances, security, telemedicine, entertainment, location-based services, care for children and the elderly, etc. This book consists of eleven chapters that cover various aspects of smart home systems.

Big Tech Tyrants Floyd Brown, Todd Cefaratti, 2019-09-03 As seen on Tucker Carlson. They are driven without respect for the lives they are changing. Boy Kings or Big Tech Tyrants are considered the most powerful individuals in the world. They are the autocratic aristocrats who run the tech giants in Silicon Valley, and if the labels are accurate, they suggest these social platform operators have gained a non-elected or should we say a self-elected authoritarian power. They wield it with more effectiveness and precision than any sitting government or military strategist. Big Tech Tyrants boast riches beyond emperors of old but act like juveniles who don't want to grow up. They are modern-day robber barons. Big Tech Tyrants don't know the meaning of privacy when it comes to you. They try to make you believe they will give their products away for free as a service to society when really they are vacuuming your personal data. They use this data to discover your deepest secrets: Are you or your partner trying to get pregnant? Are you underwater financially? Are you having an extramarital affair? Do you have a tidy nest egg? Are you a Trump supporter? Are you a Bernie Sanders follower? Are you a Scientologist, Mormon, Christian, or Buddhist? Your personal data is extremely valuable to them, and they use it and abuse it. These tyrants knowingly addict users to make more money. Not only that, they also consider themselves the most enlightened the world has ever seen, so they know what's best for you: to see from the news and information you read to the political candidates they think you should vote for. They censor news and only let you see what they want you to see. This is an eye-opening must-read for anyone living in the twenty-first century.
