Books and Pamphlets, Including Serials and Contributions to Periodicals Library of Congress. Copyright Office, 1973 *MindXpres: Conceptual and Technical Foundations for Next Generation Presentation Solutions* Reinout Roels, 2019-05-27 Presentation tools such as PowerPoint were initially created to simulate physical slides and have inherited a lot of their limitations In this dissertation we identify the shortcomings and unmet user needs in presentation software by means of literature study observations a survey and the programmatic analysis of over 12000 PowerPoint documents The results indicate that user needs are slowly evolving while existing software has hardly changed over the last 30 years We motivate the need to rethink the concept of a presentation and we provide conceptual and technical foundations that can enable interoperable and well integrated solutions for the identified shortcomings The resulting MindXpres platform consists of a new conceptual framework content model information system and presentation engine We present MindXpres as a presentation platform that enables researchers and developers to build innovative presentation solutions that cannot be implemented in the existing tools We further demonstrate the flexibility of the MindXpres platform by discussing a wide range of proof of concept plug in solutions for the identified shortcomings and unmet user needs **Discrete-time Asset Pricing Models in Applied Stochastic Finance** P. C. G. Vassiliou, 2013-03-01 Stochastic finance and financial engineering have been rapidly expanding fields of science over the past four decades mainly due to the success of sophisticated quantitative methodologies in helping professionals manage financial risks In recent years we have witnessed a tremendous acceleration in research efforts aimed at better comprehending modeling and hedging this kind of risk These two volumes aim to provide a foundation course on applied stochastic finance They are designed for three groups of readers firstly students of various backgrounds seeking a core knowledge on the subject of stochastic finance secondly financial analysts and practitioners in the investment banking and insurance industries and finally other professionals who are interested in

learning advanced mathematical and stochastic methods which are basic knowledge in many areas through finance Volume 1 starts with the introduction of the basic financial instruments and the fundamental principles of financial modeling and arbitrage valuation of derivatives Next we use the discrete time binomial model to introduce all relevant concepts The mathematical simplicity of the binomial model also provides us with the opportunity to introduce and discuss in depth concepts such as conditional expectations and martingales in discrete time However we do not expand beyond the needs of the stochastic finance framework Numerous examples each highlighted and isolated from the text for easy reference and identification are included The book concludes with the use of the binomial model to introduce interest rate models and the use of the Markov chain model to introduce credit risk This volume is designed in such a way that among other uses makes it useful as an undergraduate course
