Fundamental Mathematical Concepts for Machine Learning in Science Umberto Michelucci, 2024-05-16 This book is for individuals with a scientific background who aspire to apply machine learning within various natural science disciplines such as physics chemistry biology medicine psychology and many more It elucidates core mathematical concepts in an accessible and straightforward manner maintaining rigorous mathematical integrity For readers more versed in mathematics the book includes advanced sections that are not prerequisites for the initial reading It ensures concepts are clearly defined and theorems are proven where it is pertinent Machine learning transcends the mere implementation and training of algorithms it encompasses the broader challenges of constructing robust datasets model validation addressing imbalanced datasets and fine tuning hyperparameters These topics are thoroughly examined within the text along with the theoretical foundations underlying these methods Rather than concentrating on particular algorithms this book focuses on the comprehensive concepts and theories essential for their application It stands as an indispensable resource for any scientist keen on integrating machine learning effectively into their research Numerous texts delve into the technical execution of machine learning algorithms often overlooking the foundational concepts vital for fully grasping these methods This leads to a gap in using these algorithms effectively across diverse disciplines For instance a firm grasp of calculus is imperative to comprehend the training processes of algorithms and neural networks while linear algebra is essential for the application and efficient training of various algorithms including neural networks Absent a solid mathematical base machine learning applications may be at best cursory or at worst fundamentally flawed This book lays the foundation for a comprehensive understanding of machine learning algorithms and approaches **Monthly Catalogue, United States Public Documents**

Steve Clarke, Hazem Zohny, Julian Savulescu, 2021-08-05 Common sense morality implicitly assumes that reasonably clear distinctions can be drawn between the full moral status that is usually attributed to ordinary adult humans the partial moral status attributed to non human animals and the absence of moral status which is usually ascribed to machines and other

artifacts These implicit assumptions have long been challenged and are now coming under further scrutiny as there are beings we have recently become able to create as well as beings that we may soon be able to create which blur the distinctions between human non human animal and non biological beings These beings include non human chimeras cyborgs human brain organoids post humans and human minds that have been uploaded into computers and onto the internet and artificial intelligence It is far from clear what moral status we should attribute to any of these beings There are a number of ways we could respond to the new challenges these technological developments raise we might revise our ordinary assumptions about what is needed for a being to possess full moral status or reject the assumption that there is a sharp distinction between full and partial moral status This volume explores such responses and provides a forum for philosophical reflection about ordinary presuppositions and intuitions about moral status
