Optimality in Biological and Artificial Networks? Daniel S. Levine, Wesley R. Elsberry, 2013-06-17 This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics an interdisciplinary organization of neural network professionals in academia

and industry The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields There are several aspects to the issue of optimality First is it true that actual behavior and cognitive functions of living animals including humans can be considered as optimal in some sense Second what is the utility function for biological organisms if any and can it be described mathematically Rather than organize the chapters on a biological versus artificial basis or by what stance they took on optimality it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with The book begins with some general frameworks for discussing optimality or the lack of it in biological or artificial systems The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks The final section deals with optimality in the context of many different high level issues including exploring one's environment understanding mental illness linguistic communication and social organization The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization

Fuzzy Learning and Applications Marco Russo, Lakhmi C. Jain, 2024-04-26 With low computational complexity and relatively short development time Fuzzy Logic is an indispensable tool for engineering applications The field is growing at an unprecedented rate and there is a need for a book that describes essential tools applications examples and perspectives in the field of fuzzy learning The editors of Fuzzy Learni *Intelligent Problem Solving. Methodologies and Approaches* Rasiyah Logananthara, Günther

Palm, Moonis Ali, 2000-06-07 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems. Although the mechanisms that the human brain employs to solve problems are not yet completely known, we do have good insight into the functional processing performed by the human mind. On the basis of the understanding of these natural processes, scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems. The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome. While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments, the approach may fail when the domain knowledge is either not very well understood or changing rapidly. The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains. Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources. The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing, thus creating an excellent opportunity for agent based computations and learning. Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents, clear evidence of growing interest in this area.
