Online Scheduling in Manufacturing introduces new approaches to online scheduling based on a concept of cumulative delay. The cumulative delay is regarded as consolidated information of uncertainties under a dynamic environment in manufacturing and can be collected constantly without much effort at any points in time during a schedule execution. In this approach, the cumulative delay of the schedule has the important role of a criterion for making a decision whether or not a schedule revision is carried out. The cumulative delay approach to trigger schedule revisions has the following capabilities for the practical decision making:

- 1 To reduce frequent schedule revisions which do not necessarily improve a current situation with much expense for its operation
- 2 To avoid overreacting to disturbances dependent on strongly an individual shop floor circumstance
- 3 To simplify the monitoring process of a schedule status

Online Scheduling in Manufacturing will be of interest to both practitioners and researchers who work in planning and scheduling in manufacturing. Readers will find the importance of when to revise policies during a schedule execution and their influences on scheduling results. **Digital**
