Gero, 2024-09-27 This book publishes the reviewed and revised texts of the papers delivered at the Tenth International Conference on Design Computing DCC 24 held at Concordia University in Montreal, Canada. These papers cover the range of design research from artificial intelligence, cognitive science, cognitive neuroscience and computational theories applied to design. The papers are published in two volumes and are grouped under the following headings: Design Processes, Design Creativity, Design Cognition, Shape and Form, Design Technology, AI and Design, Design and Brain Behaviors, and Design AI Applications. These two volumes form an archival record of then current cutting edge research studying design scientifically. They demonstrate the range of approaches being used to characterize designing as a process. At the same time they show that there is a commonality in designing independent of design discipline. These volumes will be of interest to design researchers in both academia and industry and to anyone who needs to obtain a better understanding of designing. Generative AI for the Medical Student Campion Quinn, 2025-09-26 This book provides medical students with a practical, non-technical roadmap for understanding, applying and leading generative AI in clinical practice. Despite explosive interest in AI, there is no accessible, clinically focused primer tailored to medical students without programming backgrounds. Educators and students need a resource that translates theory into actionable skills: crafting effective prompts, interpreting AI outputs, embedding tools into workflows and upholding ethical and legal standards. By filling this gap, the book equips future physicians to use AI confidently and safely at the bedside and in documentation, lead pilot projects and quality improvement initiatives, navigate certification research and career development in digital health. In short, it transforms generative AI from a black box novelty into a dependable clinical partner fulfilling a critical educational need at the intersection of medicine and technology. The text begins by demystifying core AI concepts: transformers, self-attention, NLP, CNNs and Retrieval-Augmented Generation. It then moves through hands-on chapters on securing stakeholder buy-in, prompt engineering, error management and quality improvement cycles. A capstone AI Journal Club and simulation exercises reinforce learning in real-world vignettes, while later chapters guide students through ethics, research collaboration, career pathways and a SMART goal-driven lifelong learning plan. This is an ideal guide for all medical

students interested in integrating generative AI into their career
