Biopesticides in Environment and Food Security: Issues and Strategies Opende Koul, G.S. Dhaliwal, S. Khokhar, Ram Singh, 2012-06-01 Drivers behind food security and crop protection issues vis vis the food losses caused by pests include rapid human population increase climate change loss of beneficial on farm biodiversity reduction in per capita cropped land water shortages and pesticide withdrawals Integrated pest management therefore becomes a compulsory strategy in agriculture which offers a toolbox of complementary crop and region specific crop protection solutions to address these rising pressures IPM aims at more sustainable solutions by using complementary technologies and one of them is the use of biopesticides including genetically modified cropping systems The aim is to reduce pests below economic thresholds utilizing key ecological services particularly biocontrol systems via semiochemicals biopesticides precision pest monitoring tools and rapid diagnostics In fact we are facing twin problems of environment and food security for the expanding population and it is necessary to ensure adequate pesticide free food The ecofriendly nature of biopesticide products suggests environment protection and safety for natural enemies and non target organisms However their adoption and use have lagged behind due to certain constraints like variable performance under field situations lack of quality standards and interest by big industrial houses and cumbersome regulatory procedures The present book is an attempt to critically debate over all these issues and suggest a road map for future

The Handbook of Naturally Occurring Insecticidal Toxins Opende Koul, 2016-11-11 Naturally occurring toxins are among the most complicated and lethal in existence Plant species microorganisms and marine flora and fauna produce hundreds of toxic compounds for defence and to promote their chances of survival and these can be isolated and appropriated for our own use Many of these toxins have yet to be thoroughly described despite being studied for years Focusing on the natural toxins that are purely toxic to insects this book contains over 500 chemical structures It discusses the concepts and mechanisms involved in toxicity bioassay

procedures for evaluation structure activity relationships and the potential for future commercialization of these compounds A comprehensive review of the subject this book forms an important source of information for researchers and students of crop protection pest control phytochemistry and those dealing in insect plant interactions

Nuts and Seeds in Health and Disease Prevention Victor R Preedy, Ronald Ross Watson, 2020-05-17 Nuts and Seeds in Health and Disease Prevention Second Edition investigates the benefits of nuts and seeds in health and disease prevention using an organizational style that will provide easy access to information that supports identifying treatment options and the development of symptom specific functional foods This book examines seeds and nuts as agents that affect metabolism and other health related conditions and

explores the impact of compositional differences between various seeds and nuts including differences based on country of origin and processing technique Finally the book includes methods for the analysis of seed and nut related compounds Written for nutrition researchers nutritionists food scientists government regulators of food and students of agriculture oils and feeds nutrition and life sciences this book is sure to be a welcomed resource Identifies options and opportunities for improving health through the consumption of nut and seed products Provides easy access to information that supports the identification of treatment options Contains insights into health benefits that will assist in development of symptom specific functional foods Examines seeds and nuts as agents that affect metabolism and other health related conditions Explores the impact of compositional differences between various seeds and nuts including differences based on country of origin and processing technique Includes methods for analysis of seed and nut related compound Step Wise Protocols for Somatic Embryogenesis of Important Woody Plants Shri Mohan Jain, Pramod Gupta, 2018-05-30 World population is increasing at an alarming rate and this has resulted in increasing tremendously the demand for tree products such as wood for construction materials fuel and paper fruits oils and medicines etc This has put immense pressure on the world's supplies of trees and raw material to industry and will continue to do so as long as human population continues to grow Also the quality of human diet especially nutritional components is adversely affected due to limited genetic improvement of most of fruit trees Thus there is an immediate need to increase productivity of trees Improvement has been made through conventional breeding methods however conventional breeding is very slow due to long life cycle of trees A basic strategy in tree improvement is to capture genetic gain through clonal propagation Clonal propagation via organogenesis is being used for the production of selected elite individual trees However the methods are labour intensive costly and produce low volumes Genetic gain can now be captured through somatic embryogenesis Formation of embryos from somatic cells by a process resembling zygotic embryogenesis is one of the most important features of plants In 1958 Reinert in Germany and Steward in USA independently reported somatic embryogenesis in carrot cultures Since then tremendous progress in somatic embryogenesis of woody and non woody plants has taken place It offers a potentially large scale propagation system for superior clones

Biorational Control of Arthropod Pests Isaac Ishaaya, A. Rami Horowitz, 2009-08-28 For nearly 50 years pest control was mostly based on broad spectrum conventional insecticides such as organochlorines organophosphates carbamates and pyrethroids However the severe adverse effects of pesticides on the environment problems of resistance reaching crisis proportions and public protests led to stricter regulations and legislation aimed at reducing their use Ways to reduce the use of synthetic pesticides in plant protection and to use more alternative and novel methods for pest control or biorational control are the challenges of pest control for the twenty first century The term biorational biological rational pesticides can be defined as the use of specific and selective chemicals often with a unique modes of action that are compatible with natural enemies and the environment with minimal effect on n target organisms Biorational control is based on a diversity of

chemical biological and physical approaches for controlling insect pests which results in minimum risk to man and the environment

Nano-Biopesticides Today and Future Perspectives Opender Koul, 2019-03-16 Nano Biopesticides Today and Future Perspectives is the first single volume resource to examine the practical development implementation and implications of combining the environmentally aware use of biopesticides with the potential power of nanotechnology While biopesticides have been utilized for years researchers have only recently begun exploring delivery methods that utilize nanotechnology to increase efficacy while limiting the negative impacts traditionally seen through the use of pest control means Written by a panel of global experts the book provides a foundation on nano biopesticide development paths plant health and nutrition formulation and means of delivery Researchers in academic and commercial settings will value this foundational reference of insights within the biopesticide realm Provides comprehensive insights including relevant information on environmental impact and safety technology development implementation and intellectual property Discusses the role of nanotechnology and its potential applications as a nanomaterial in crop protection for a cleaner and greener agriculture Presents a strategic comprehensive and forward looking approach

Sustainable Management of Invasive Pests in Africa Saliou Niassy, Sunday Ekesi, Lorna Migiro, Washington Otieno, 2020-07-13 Invasive species generally affect economically important crops thus affecting the livelihoods of millions of people along crop value chains Typically invasive species have high migratory capabilities and because of plant material exchanges made during trade they cannot be contained by one country Usually African countries react after a pest has invaded and established itself in the country making the cost of mitigating the pest even more expensive This book presents a pan African view of the impacts of invasive insect pests on agriculture and of how invasive species impact on productivity in Africa It not only describes their importance but also presents a diversity of research findings in the field ranging from the use of early warning and monitoring systems for quarantine purposes agricultural extension all the way to control strategies The IPM arsenal presented in this book includes the use of botanical bioactive compounds semiochemicals resistant varieties biological control agents such as entomopathogens endophytes predators and natural enemies Aspects of technology transfer strategies regional coordination and farmers perceptions have not been overlooked because these affect the adoption of mitigation strategies The book also presents measures that would help agricultural research services to estimate the damage and take actions for preparedness and readiness to face invasive insect pests This starts with a basic knowledge of taxonomy to enable concerned persons to describe the insects and the vast inventory of affected crops Physiological and ecological aspects of invasive pests are strongly highlighted to strengthen Integrated Pest Management Strategies The threat of invasive species will remain permanent therefore the book encourages knowledge exchange and collaboration between researchers and scientists on the continent while encouraging the establishment of a platform or a fund for preparedness and rapid response
