

Example 3. Consider a right circular cone of height h with a base of radius r .

(a) Use similar triangles to find the area of a cross-section at height y .

(b) Find the volume of the cone.

$$V = \int_0^h (A(y)) dy = \int_0^h \frac{\pi r^2 (h-y)^2}{h^2} dy = \frac{\pi r^2}{h^2} \int_0^h (h-y)^2 dy$$

$$\rightarrow \frac{\pi r^2}{h^2} \int_h^0 u^2 \cdot -1 du = -\frac{\pi r^2}{h^2} \left(\frac{u^3}{3} \right) \Big|_h^0 = -\frac{\pi r^2}{h^2} \left(\frac{0^3}{3} - \frac{h^3}{3} \right) = \frac{\pi r^2 h}{3} \text{ (units}^3\text{)}$$

side work

$$u = h - y$$

$$du = -1 dy$$

$$-1 du = dy$$

when $y = 0$, $u = h$

when $y = h$, $u = 0$

Important Note: The cone above can be obtained by revolving the region about the y -axis.

Solids obtained by revolving a region about a line are called **solids of revolution**. Volumes of these solids can be obtained by computing

$$V = \int_a^b A(x) dx \quad \text{or} \quad V = \int_a^b A(y) dy$$

The cross-sectional area $A(x)$ or $A(y)$ is found by finding the area of **disks or washers**.

Calculus and Vectors Peter Crippin, Robert Donato, Chris Kirkpatrick, 2008-08-19 Fully worked step by step solutions for every question in the Nelson Calculus and Vectors Student Book **Calculus and Vectors**, 2009 *Vector and Tensor Analysis* Louis Brand, 2020-04-15 An outstanding introduction to tensor analysis for physics and engineering students this text admirably covers the expected topics in a careful step by step manner In addition to the standard vector analysis of Gibbs including dyadic or tensors of valence two the treatment also supplies an introduction to the algebra of motors The entire theory is illustrated by many significant applications Surface geometry and hydrodynamics are treated at length in separate chapters Nearly all of the important results are formulated as theorems in which the essential conditions are explicitly stated Each chapter concludes with a selection of problems that develop students technical skills and introduce new and important applications The material may be adapted for short courses in either vector analysis or tensor analysis **Solution Sets of**

Differential Equations in Abstract Spaces Robert Dragoni, Paolo Nistri, Pietro Zecca, Jack W Macki, 1996-04-03 This book presents results on the geometric topological structure of the solution set S of an initial value problem $x'(t) = f(t, x(t))$ when f is a continuous function with values in an infinite dimensional space A comprehensive survey of existence results and the properties of S e.g. when S is a connected set a retract an acyclic set is presented The authors also survey results on the properties of S for initial value problems involving differential inclusions and for boundary value problems This book will be of particular interest to researchers in ordinary and partial differential equations and some workers in control theory

Global and Stochastic Analysis with Applications to Mathematical Physics Yuri E. Gliklikh, 2010-12-07 Methods of global analysis and stochastic analysis are most often applied in mathematical physics as separate entities thus forming important directions in the field However while combination of the two subject areas is rare it is fundamental for the consideration of a broader class of problems This book develops methods of Global Analysis and Stochastic Analysis such that their combination allows one to have a more or less common treatment for areas of mathematical physics that traditionally are considered as divergent and requiring different methods of investigation Global and Stochastic Analysis with Applications to Mathematical Physics covers branches of mathematics that are currently absent in monograph form Through the demonstration of new topics of investigation and results both in traditional and more recent problems this book offers a fresh perspective on ordinary and stochastic differential equations and inclusions in particular given in terms of Nelson's mean derivatives on linear spaces and manifolds Topics covered include classical mechanics on non linear configuration spaces problems of statistical and quantum physics and hydrodynamics A self contained book that provides a large amount of preliminary material and recent results which will serve to be a useful introduction to the subject and a valuable resource for further research It will appeal to researchers graduate and PhD students working in global analysis stochastic analysis and mathematical physics

Vector Calculus William Cox, 1998-05-01 Building on previous texts in the Modular Mathematics series in particular Vectors in Two or Three Dimensions and Calculus and ODEs this book introduces the student to the concept of vector calculus It provides an overview of some of the key techniques as well as examining functions of more than one variable including partial differentiation and multiple integration Undergraduates who already have a basic understanding of calculus and vectors will find this text provides tools with which to progress onto further studies scientists who need an overview of higher order differential equations will find it a useful introduction and basic reference

Brownian Motion and Stochastic Calculus Ioannis Karatzas, Steven Shreve, 2014-03-27 This book is designed as a text for graduate courses in stochastic processes It is written for readers familiar with measure theoretic probability and discrete time processes who wish to explore stochastic processes in continuous time The vehicle chosen for this exposition is Brownian motion which is presented as the canonical example of both a martingale and a Markov process with continuous paths In this context the theory of stochastic integration and stochastic calculus is developed The power of this calculus is illustrated by results concerning representations of martingales and change of measure on Wiener space and these in turn permit a presentation of recent advances in financial economics option pricing and consumption investment optimization This book contains a detailed discussion of weak and strong solutions of stochastic differential equations and a study of local time for semimartingales with special emphasis on the theory of Brownian local time The text is complemented by a large number of problems and exercises
