Information, Management and Participation Francesco di Notarbartolo Villarosa, 2005-08-02 In order to alleviate poverty people oriented projects those dealing with activities such as institutional development health family planning education and rural development must be well targeted towards the most vulnerable groups However official top down information is incapable of identifying prioritising and marking out these groups at a local level and the result is too often an unfair inefficient and ineffective allocation and use of the resources of social programmes The author argues that a process approach is often

necessary to generate relevant knowledge about local needs especially in poor urban and heterogeneous areas. Such an approach fosters flexibility and adaptability to the local context. The book analyses the whole approach to information handling which was developed in the Brazilian project. The different phases are analysed: the collection and processing of data and the construction of an information system to be used for decision making.

Discovery-Based Learning in the Life Sciences Kathleen M. Susman, 2015-09-28. For nearly a decade, scientists, educators and policy makers have issued a call to college biology professors to transform undergraduate life sciences education. As a gateway science for many undergraduate students, biology courses are crucial to addressing many of the challenges we face, such as climate change, sustainable food supply and fresh water, and emerging public health issues. While canned laboratories and cook book approaches to college science education do teach students to operate equipment, make accurate measurements and work well with numbers, they do not teach students how to take a scientific approach to an area of interest about the natural world. Science is more than just techniques, measurements and facts; science is critical thinking and interpretation, which are essential to scientific research. Discovery Based Learning in the Life Sciences presents a different way of organizing and developing biology teaching laboratories to promote both deep learning and understanding.
