Dominique Laffly, 2020-06-03 This book presented in three volumes examines environmental disciplines in relation to major players in contemporary science Big Data artificial intelligence and cloud computing Today there is a real sense of urgency regarding the evolution of computer technology the ever increasing volume of data threats to our climate and the sustainable development of our planet As such we need to reduce technology just as much as we need to bridge the global socio economic gap between the North and South between universal free access to data open data and free software open source

In this book we pay particular attention to certain environmental subjects in order to enrich our understanding of cloud computing. These subjects are erosion, urban air pollution and atmospheric pollution in Southeast Asia, melting permafrost causing the accelerated release of soil organic carbon in the atmosphere, alert systems of environmental hazards such as forest fires, prospective modeling of socio-spatial practices and land use, and web fountains of geographical data. Finally, this book asks the question in order to find a pattern in the data: how do we move from a traditional computing model based world to pure mathematical research? After thorough examination of this topic, we conclude that this goal is both transdisciplinary and achievable.

High-Performance Computing on the Intel® Xeon Phi™ Endong Wang, Qing Zhang, Bo Shen, Guangyong Zhang, Xiaowei Lu, Qing Wu, Yajuan Wang, 2014-06-26. The aim of this book is to explain to high performance computing (HPC) developers how to utilize the Intel Xeon Phi™ series products efficiently. To that end, it introduces some computing grammar, programming technology, and optimization methods for using many integrated core (MIC) platforms and also offers tips and tricks for actual use based on the authors' first-hand optimization experience. The material is organized in three sections. The first section, Basics of MIC, introduces the fundamentals of MIC architecture and programming, including the specific Intel MIC programming environment. Next, the section on Performance Optimization explains general MIC optimization techniques, which are then illustrated step by step using the classical parallel programming example of matrix multiplication. Finally, Project development presents a set of practical and experience-driven methods for using parallel computing in application projects, including how to determine if a serial or parallel CPU program is suitable for MIC and how to transplant a program onto MIC. This book appeals to two main audiences. First, software developers for HPC applications: it will enable them to fully exploit the MIC architecture and thus achieve the extreme performance usually required in biological, genetics, medical imaging, aerospace, meteorology, and other areas of HPC. Second, students and researchers engaged in parallel and high performance computing: it will guide them on how to push the limits of system performance for HPC applications.

The Oracle of Artificial Intelligence Sreenivas Peddiraju, 2025-03-30. The Story: Three ambitious AI researchers, supported by two of their friends, try to address the uncontrolled growth of AI technology and its misuse by corporations and governments. They search for a solution to provide a new direction for AI for the good of humanity. What support do they receive, and do they finally achieve their goal? Many characters in the story are inspired by real people, sometimes up to 100%. The author fully owns the hypothesis and the hallucinations, as termed by AI professionals, of the story. Gladly about the Author: the Book AI is now a daily trending topic with tons of content discussing problems but hardly any offering solutions. More than you, your children, the next generation must navigate these uncertain times. Moreover, they will learn everything about Artificial Intelligence from YouTube and social media. But who will guide them to the oldest intelligence, the subtle natural intelligence of humans, and the history of natural languages, their necessity, relevance to their future, and even their connection to modern AI? As a father of two, I have chosen to write a human story over a sci-fi narrative to explore the possibilities of solving AI.

related concerns With hope for positive times ahead this hypothesis must become reality as soon as possible and that will happen only if we all wish to make it so This book aims to help readers young and open in heart recognize the science behind ancient wisdom The Mundaka Upanishad says Svasti vah par ya tamasa parast t May your efforts to cross the ocean of darkness of ignorance and reach the shores of light and peace be fulfilled So the genre aligns with The Path of Enlightenment and its chosen title The Oracle of Artificial Intelligence It is intended for general readers aged 15 and up requiring only curiosity prior tech knowledge is only a bonus Some sections deliberately adopt a textbook like style for the general audience while a few thoughts on possible technical solutions are included for those tracking AI research closely However general readers can safely skip these sections and still grasp the essence of the story Additional references are available upon request I d love to hear your feedback Stay blessed and I wish you a happy reading journey into your golden future Sreenivas
