SCIENCE PROJECTS IN RENEWABLE ENERGY AND ENERGY EFFICIENCY , The Value of Science Projects Science projects are an especially effective way of teaching students about the world around them Whether conducted in the classroom or for a science fair science projects can help develop critical thinking and problem solving skills In a classroom setting science projects offer a way for teachers to put action into the lessons The students have fun while they re learning important knowledge and skills And the teacher often learns with the students experiencing excitement with each new discovery Science projects are generally of two types non experimental and experimental Non experimental projects usually reflect what the student has read or heard about in an area of science By creating displays or collections of scientific information or demonstrating certain natural phenomena the student goes through a process similar to a library research report or a meta analysis in any other subject Projects of this type may be appropriate for some students at a very early level but they usually do not provide the experiences that develop problem solving skills related to the scientific process On the other hand experimental projects pose a question or hypothesis which is then answered by doing an experiment or by modeling a phenomenon The question doesn t have to be something never before answered by scientist that is not necessary to conduct original research The process of picking a topic designing an experiment and recording and analyzing data is what s important

The impact of spending cuts on science and scientific research Great Britain: Parliament: House of Commons: Science and Technology Committee,2010-03-25 The pressure to be seen to be making cuts across the public sector is threatening to undermine both the Government s good record on investment in science and the economic recovery Whilst the contribution of a strong domestic science base is widely acknowledged methodological problems with quantifying its precise value to the economy mean that it is in danger of losing out in Whitehall negotiations Scientists are under increasing pressure to demonstrate the impact of their work and there is concern that areas without immediate technology applications are being undervalued The Committee believes the Government faced a strategic choice invest in areas with the greatest potential to influence and improve other areas of spending or make cuts of little significance now but that will have a devastating effect upon British science and the economy in the years to come *Science for Sale* Daniel S.

Greenberg,2008-09-15 In recent years the news media have been awash in stories about increasingly close ties between college campuses and multimillion dollar corporations Our nation s universities the story goes reap enormous windfalls patenting products of scientific research that have been primarily funded by taxpayers Meanwhile hoping for new streams of revenue from their innovations the same universities are allowing their research and their very principles to become compromised by quests for profit But is that really the case Is money really hopelessly corrupting science With *Science for Sale* acclaimed journalist Daniel S Greenberg reveals that campus capitalism is more complicated and less profitable than media reports would suggest While universities seek out corporate funding news stories rarely note that those industry

dollars are dwarfed by government support and other funds Also while many universities have set up technology transfer offices to pursue profits through patents many of those offices have been financial busts Meanwhile science is showing signs of providing its own solutions as highly publicized misdeeds in pursuit of profits have provoked promising countermeasures within the field But just because the threat is overhyped Greenberg argues doesn't mean that there's no danger From research that has shifted overseas so corporations can avoid regulations to conflicts of interest in scientific publishing the temptations of money will always be a threat and they can only be countered through the vigilance of scientists the press and the public Based on extensive candid interviews with scientists and administrators Science for Sale will be indispensable to anyone who cares about the future of scientific research
