Artificial Intelligence 'Arms Dynamics': The Case Of The U.S. And China Rivalry Gloria Shkurti Özdemir, Artificial Intelligence AI has undergone rapid evolution not only by penetrating every aspect of our life but also by transitioning from theoretical concepts to foundational components of modern military strategy This book focuses into the heart of this evolution focusing on the escalating AI arms rivalry between the U S and China Drawing upon Barry Buzan s theoretical frameworks this book aims to analyze if there is an AI arms race between the U S and China as a part of the ongoing great power competition Findings from the study indicate that both countries perceive AI as a pivotal element of future warfare and national security leading to significant investments in research and development The U S with its historically dominant military technological edge seeks to maintain its superiority through innovation and strategic partnerships Conversely China s ambitious AI strategy aims to establish its leadership in AI technology by 2030 challenging U S dominance and reshaping the global security landscape The analysis reveals that rather than an AI arms race where the possibility for warfare should be high the rivalry between U S China is more an AI arms competition with both states not willing to start a direct war with each other at least for the short term Furthermore the study finds out that the AI arms competition between both states is driven by both external threats and internal motivations however the technological imperative which is considered as an independent variable is the main driving force behind this rivalry In conclusion the research suggests that the AI arms competition between the U S and China is a defining feature of contemporary international security dynamics with profound implications for global stability
