Design and Construction of an RFID-enabled Infrastructure Nagabhushana Prabhu, 2013-11-20 Internet 2.0 previously called the Internet of Things presents a tantalizing vision of bridging the cyber and physical worlds to forge a seamless planet wide infrastructure in which cyber resources and physical objects can interact without human intervention The technology needed to build the infrastructure already exists However more than a decade after the vision of Internet 2.0 was articulated it remains largely unrealized except in isolated settings Following a background discussion *Design and Construction of an RFID enabled Infrastructure the Next Avatar of the Internet* addresses three questions what are the barriers to the emergence of Internet 2.0 as a global infrastructure What are the features that Internet 2.0 architecture must have if it is to become a successful global infrastructure How can one build a prototype of Internet 2.0 The quest for answers to the above questions threads the narrative through the birthing process and maturation of two successful global infrastructures the Internet and the web Based on a review of the design philosophies underlying the Internet and the Web their histories and the strategic stewardship that midwived their births the book presents the architectural guidelines for the Internet 2.0 infrastructure as well as a blueprint for the construction of its prototype The discussion in the book is consolidated into a list of technical and strategic guidelines intended to facilitate the incubation of Internet 2.0

on Network Security and Applications held in Chennai India in July 2011 The 63 revised full papers presented were carefully reviewed and selected from numerous submissions The papers address all technical and practical aspects of security and its applications for wired and wireless networks and are organized in topical sections on network security and applications ad hoc sensor and ubiquitous computing as well as peer to peer networks and trust management Software Engineering Research, Management and Applications 2011 Roger Lee,2011-11-06 The purpose of the 9th International Conference on Software Engineering Research Management and Applications SERA 2011 held on August 10 12 2011 in Baltimore Maryland was to bring together scientists engineers computer users and students to share their experiences and exchange new ideas and research results about all aspects theory applications and tools of computer and information sciences and to discuss the practical challenges encountered along the way and the solutions adopted to solve them The conference organizers selected 12 outstanding papers from SERA 2011 all of which you will find in this volume of Springer s Studies in Computational Intelligence **Reuse in Emerging Software Engineering Practices** Sihem Ben Sassi,Stéphane Ducasse,Hafedh Mili,2020-11-30 This book constitutes the proceedings of the 19th International Conference on Software and Systems Reuse ICSR 2020 held in Hammamet Tunisia in December 2020 Due to COVID 19 pandemic the Conference was held virtually The 16 full papers and 2 short papers included in this book were carefully reviewed and selected from 60 submissions The papers were organized in topical sections named modelling reuse in practice reengineering recommendation and empirical analysis **Business Modeling and Software Design** Boris Shishkov,2015-05-30 This book contains the extended and revised versions of selected papers from the 4th International Symposium on Business Modeling and Software Design BMSD 2014 held in Luxembourg Luxembourg in June 2014 The symposium was organized and sponsored by the Interdisciplinary Institute for Collaboration and Research on Enterprise Systems and Technology IICREST in collaboration with the Public Research Centre Henri Tudor TUDOR Cooperating organizations were the Dutch Research School for Information and Knowledge Systems SIKS Aristotle University of Thessaloniki AUTH the UTwente Center for Telematics and Information Technology CTIT and AMAKOTA Ltd The 37 papers presented at BMSD 2014 were selected from 52 submissions The seven papers published in this book were carefully reviewed selected revised and extended from the presented papers The selection considers a large number of BMSD relevant research topics from modeling and simulation related subjects such as declarative business rules business process modeling business process simulation and information systems modeling through architectures related areas such as impact analysis with regard to enterprise architectures and architectural principles for service cloud applications to topics touching upon quality of service aware service systems *Distributed Simulation* Okan Topçu,Umut Durak,Halit Oğuztüzün,Levent Yilmaz,2016-01-27 This unique text reference provides a comprehensive review of distributed simulation DS from the perspective of Model Driven Engineering MDE illustrating how MDE affects the overall lifecycle of the simulation development process Numerous practical case studies are included to demonstrate the utility and

applicability of the methodology many of which are developed from tools available to download from the public domain

Topics and features Provides a thorough introduction to the fundamental concepts principles and processes of modeling and simulation MDE and high level architecture Describes a road map for building a DS system in accordance with the MDE perspective and a technical framework for the development of conceptual models Presents a focus on federate simulation environment architectures detailing a practical approach to the design of federations i e simulation member design Discusses the main activities related to scenario management in DS and explores the process of MDE based implementation integration and testing Reviews approaches to simulation evolution and modernization including architecture driven modernization for simulation modernization Examines the potential synergies between the agent DS and MDE methodologies suggesting avenues for future research at the intersection of these three fields Distributed Simulation A Model Driven Engineering Approach is an important resource for all researchers and practitioners involved in modeling and simulation and software engineering who may be interested in adopting MDE principles when developing complex DS systems Application Architecture for .NET Microsoft Corporation,2002 Get expert architectural and design level guidance for building distributed solutions with the Microsoft NET Framework learning how to synthesize your knowledge of application development servers and infrastructure and business requirements This guide assumes you are familiar with NET component development and the basic principles of a layered distributed application design It examines architectural issues and solution design for a range of project stakeholders whether you build and design applications and services recommend appropriate technologies and products for applications and services make design decisions to meet functional and nonfunctional requirements or choose appropriate communications mechanisms for applications and services providing straightforward guidance recommendations and best practices gleaned from real world solution development All PATTERNS PRACTICES guides are reviewed and approved by Microsoft engineering teams consultants partners and customers delivering accurate real world information that s been technically validated and tested **Effective Coding with VHDL** Ricardo Jasinski,2016-05-27 A guide to applying software design principles and coding practices to VHDL to improve the readability maintainability and quality of VHDL code This book addresses an often neglected aspect of the creation of VHDL designs A VHDL description is also source code and VHDL designers can use the best practices of software development to write high quality code and to organize it in a design This book presents this unique set of skills teaching VHDL designers of all experience levels how to apply the best design principles and coding practices from the software world to the world of hardware The concepts introduced here will help readers write code that is easier to understand and more likely to be correct with improved readability maintainability and overall quality After a brief review of VHDL the book presents fundamental design principles for writing code discussing such topics as design quality architecture modularity abstraction and hierarchy Building on these concepts the book then introduces and provides recommendations for each basic element of VHDL code including statements design units types data

objects and subprograms The book covers naming data objects and functions commenting the source code and visually presenting the code on the screen All recommendations are supported by detailed rationales Finally the book explores two uses of VHDL synthesis and testbenches It examines the key characteristics of code intended for synthesis distinguishing it from code meant for simulation and then demonstrates the design and implementation of testbenches with a series of examples that verify different kinds of models including combinational sequential and FSM code Examples from the book are also available on a companion website enabling the reader to experiment with the complete source code TPACK:
