Solutions Manual to Microwave Engineering David M. Pozar, 1990 Microwave Engineering David M. Pozar, 2021

The 4th edition of this classic text provides a thorough coverage of RF and microwave engineering concepts starting from fundamental principles of electrical engineering with applications to microwave circuits and devices of practical importance. Coverage includes microwave network analysis, impedance matching, directional couplers and hybrids, microwave filters, ferrite devices, noise, nonlinear effects, and the design of microwave oscillators, amplifiers, and mixers. Material on microwave and RF systems includes wireless communications, radar, radiometry, and radiation hazards. A large number of examples and end of chapter problems test the reader's understanding of the material. The 4th edition includes new and updated material on systems, noise, active devices, and circuits, power waves, transients, RF CMOS circuits, and more. Electronic Beam Steering and Polarization Agile Planar Antennas in Liquid Crystal Technology Onur Hamza Karabey, 2013-08-04

This book describes the characterization of liquid crystal materials at microwave frequencies and the usage of these materials in reconfigurable planar antennas and in their electrical tunable components. It reports for the first time the realization of a two-dimensional electronic beam steering antenna and polarization agile planar antennas with liquid crystal display technology. It gives a detailed description of all the theoretical analyses, modeling, and design methods that were involved in the realization of these devices, as well as their validation using measurement of demonstrative prototypes. This book also shows that low profile, low cost, high gain electronic beam steering and polarization agile antennas can be fabricated in larger sizes by using existing automated liquid crystal display manufacturing techniques. The innovative ideas and methods described in this work represent a considerable advancement in the field of electronically reconfigurable antennas based on liquid crystal technology and are expected to draw significant interest in the future. Such antennas may become important, for example, in mobile terminals integrated into the body of laptops, in the cover of automobiles, in the rooftop ships or boats for which flat, low profile, and low cost antennas are required.
