Middle Range Theory Development Using King's Conceptual System:

Middle Range Theory Development Using King's Conceptual System Christina Leibold Sieloff, Maureen A. Frey, 2007-02-15 Continuing development and testing of propositions and formulations from nursing theory are critical for the continued evolution of nursing science. In this text, the editors and contributors highlight significant work in middle range theory development using King's Conceptual System and Theory of Goal Attainment. Explored in the three sections of this volume are: An overview of the foundations on which middle range theories are built from within King's Conceptual System including a chapter by Dr. King; Presentation of a variety of middle range theories applied to individuals, groups, and families and organizations from children to the elderly; Examination of post middle range theory development and challenges for further nursing research and education. Each chapter has a consistent format and includes a wide range of perspectives and geographical locations allowing readers to compare knowledge building efforts across international lines. **Nursing Theory** Martha Raile Alligood, 2013-08-13 Nursing Theory Utilization: the application of different nursing theories, models, and philosophies and the expansion of these practices with a look toward the future. This text provides the opportunity for students who have learned the background of nursing theory using the companion title *Nursing Theorists and Their Work* to apply what they have learned to actual nursing practice through various patient scenarios. Real life case history examples included in application chapters promote evidence based practice and further demonstrate how a theory is used in practical situations. Consistent case history featuring the patient Debbie in every chapter and the nursing plan that follows help you apply philosophies, theories, and models presented in the text. Critical thinking exercises provide a more application based approach rather than just contemplation of theories presented. Chapters written by contributors who utilize the work offer a unique approach to using theory in practice. Nursing metaparadigm discussion illustrates the four center concepts with which the discipline is concerned to help you see the scope of concern for the profession. Logical organization presents content in three distinct parts. Glossary offers quick access to key terms throughout the text. Updated nursing application examples feature realistic scenarios that promote evidence based practice. Scenarios have been updated using references to current literature and evidence based clinical research. New information on the benefits and cautions associated with evidence based practice including a new discussion of praxis, a dynamic process where theory and practice come together. Updated critical thinking exercises reflect the role of the nursing professional and advanced nursing practice encouraging a higher level of thinking regarding the integration of theory and practice. **Theoretical Nursing** Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should

be used rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories; therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice and others believing it should be driven by research.
