England and the Discovery of America, 1481-1620 David B. Quinn, 2023-08-18 First published in 1974 England and the Discovery of America places the early explorations of the English in North America in the broad context of 15th and 16th century history Marshalling evidence that cannot be pushed aside and sifting a mass of fascinating detail including problems of cartography and the Vinland Map controversy Professor Quinn presents circumstantial indications pointing to 1481 as the date of the discovery of America by Bristol voyagers fishermen seeking new sources of cod and merchant sailors with maps carrying promise of unexploited Atlantic islands Whereas England did little to follow up her early lead Quinn demonstrates that English initiatives from the 1580s onward though slow were of great importance He brings to life the men involved in a variety of rash and heroic experiments in colonization and casts new light on their fates He makes it clear that it was this very profusion of trial and error and trail again as well as the conviction that settlement in temperate latitudes in North America could be effective if tenaciously enough sought that enabled the English to strike and maintain routes in their new American world This book will be of interest to students of English history American history colonial history and naval history

Chemical Kinetics with Mathcad and Maple Viktor Korobov, Valery Ochkov, 2011-05-26 The authors explain at length the principles of chemical kinetics and approaches to computerized calculations in modern software suites mathcad and maple Mathematics is crucial in determining correlations in chemical processes and requires various numerical approaches Often significant issues with mathematical formalizations of chemical problems arise and many kinetic problems can't be solved without computers Numerous problems encountered in solving kinetics calculations with detailed descriptions of the numerical tools are given Special attention is given to electrochemical reactions which fills a gap in existing texts not covering this topic in detail The material demonstrates how these suites provide quick and precise behavior predictions for a system over time for postulated mechanisms Examples i.e. oscillating and non isothermal reactions help explain the use of mathcad more efficiently Also included are the results of authors own research toward effective computations

Prisoners of Time United States. National Education Commission on Time and Learning, 1994 The Education Council Act of 1991 established the National Education Commission on Time and Learning as an independent advisory body and called for a comprehensive review of the relationship between time and learning in U.S. schools This document serves as a supplementary volume to the commission's first report released in May 1994 which found that most school reform designs are structurally flawed by their adherence to a traditional school calendar This volume describes innovative approaches to the use of school time It provides nearly 40 examples of exemplary efforts to make better use of available time and extend the amount of time students spend learning The brief program descriptions are from 15 elementary schools 15 middle and senior high schools 4 districtwide efforts and 6 special programs They include public and private schools in rural urban and suburban areas from 26 states Information for

reaching contact persons is provided A review of the programs indicates that many different kinds of schools and districts have already implemented many of the commission s recommendations The most common approaches in descending order include 1 redesigning available time 2 employing technology 3 extending the school day or year 4 providing time for professional development and 5 providing support services for children or families Finally the approaches to the redesign of time usage differ by school level LMI
