Preservation of Cultural Heritage and Resources Threatened by Climate Change Chiara Bertolin, 2019-08-13 With its wide spectrum of data case studies monitoring and experimental and numerical simulation techniques the multidisciplinary approach of material environmental and computer science applied to the conservation of cultural heritage offers several opportunities for the heritage science and conservation community to map and monitor state of the art knowledge on natural and human induced climate change impacts on cultural heritage mainly constituted by the built environment in Europe and Latin America Geosciences Special Issue titled Preservation of Cultural Heritage and Resources Threatened by Climate Change was launched to take stock of the existing but still fragmentary knowledge on this challenge and to enable the community to respond to the implementation of the Paris agreement These 10 papers exploit a broad range of data derived from preventive conservation monitoring conducted indoors in museums churches historical buildings or outdoors in archeological sites and city centers Case studies presented in the papers focus on a well assorted sample of decay phenomena occurring on heritage materials e g surface recession and biomass accumulation on limestone depositions of pollutant on marble salt weathering on inorganic building materials and weathering processes on mortars in many local to regional scale study areas in the Scandinavian Peninsula the United Kingdom Belgium France Italy Greece and Panama Besides monitoring the methodological approaches showcased include but are not limited to original material characterization decay product characterization and climate and numerical modelling on material components for assessing environmental impact and climate change effects

Addressing Environmental Challenges Through Spatial Planning Hussain, Athar, Tiwari, Kailash Chandra, Gupta, Alpana, 2021-12-17 Urbanization is giving rise to environmental concerns including urban flooding which generally occurs due to the construction of houses in the low lying areas loss of green cover leading to a disturbance in the ecological cycle water scarcity due to growing needs and deforestation leading to habitat fragmentation wildlife corridors disturbance forest fires and climate change In order to correct these issues a consolidated balance between human nature and spatial aspects must be resolved and spatial solutions integrated on a common platform Addressing Environmental Challenges Through Spatial Planning is devoted to addressing environmental concerns and technology innovations in domains such as pollution water insecurity and resources management This text works to bridge the gap between engineering considerations and spatial aspects of planning Covering topics such as sustainable housing environmental restoration and air emissions this text is essential for environmental engineers planning researchers faculty environmental and civil administrators architects consultants environmental activists town and country planning organizations and professionals in all industries who aspire to have an environmentally friendly atmosphere and to provide a sustainable way of dealing with the environment in their respective domains for process efficiency and cost optimization

in aquatic ecosystems groundwater contamination wastewater management and reuse circular economy approaches to pollutant lifecycle management and the prioritization of emerging pollutants in the hydro cycle Based on scientific evidence and policy relevant research findings the book s concluding chapter highlights research and policy gaps offering recommendations for strategic and practical ways to manage emerging pollutants towards sustainable water management in the face of global changes and evolving environmental threats This book is a scientific output in the framework of UNESCO Intergovernmental Hydrological Programme s Ninth Phase Science for a Water Secure World in a Changing Environment IHP IX 2022 2029 and UNESCO IHP s International Initiative on Water Quality IIWQ in collaboration with the International Water Resources Association IWRA

Ecological and Health Effects of Building Materials Junaid Ahmad Malik,Shriram Marathe,2021-08-07 This book deals with the present adverse effects of using precarious building materials on the ecology and human health Also the detailed discussions on the novel and greener construction materials and their utilization as an alternative to the conventional harmful existing methods and materials are also presented in the subsequent chapters This book helps to fill the research gaps in the existing prior art knowledge in the field of sustainable construction and green building materials and methods giving due importance to ecology and health specifically to the fields of sustainable structural engineering sustainable geotechnical engineering sustainable road engineering etc This book helps in achieving a sustainable environment through possible adoption of innovative and ecological construction practices Hence this book acts as a practical workbook mainly for the academicians and practicing engineers who are willing to work toward the consecrated building industry It is a well established fact that the constructions of the engineering structures consume more and more earth resources than any other human activities in the world In addition the construction related activities will produce several million tons of greenhouse gases toxic emissions water pollutants and solid wastes This creates a huge impact on environment and causes severe health issues on humans and animals It is thus important to create an eco friendly construction environment which can satisfy the ecological and health requirements

Carbon-Neutral Architectural Design Pablo M. La Roche,2017-07-14 The energy used to operate buildings is one of the most significant sources of greenhouse gas emissions While it is possible to reduce emissions through climate responsive design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies This new revised edition is updated throughout and includes a new chapter on building simulations
