On the Cognitive, Ethical, and Scientific Dimensions of Artificial Intelligence Don Berkich, Matteo Vincenzo d'Alfonso, 2019-01-28 This edited volume explores the intersection between philosophy and computing. It features work presented at the 2016 annual meeting of the International Association for Computing and Philosophy. The 23 contributions to this volume neatly represent a cross section of 40 papers, four keynote addresses, and eight symposia as they cut across six distinct research agendas. The volume begins with foundational studies in computation and information epistemology and philosophy of science and logic. The contributions next examine research into computational aspects of cognition and philosophy of mind. This leads to a look at moral dimensions of man-machine interaction as well as issues of trust, privacy, and justice. This multi-disciplinary or better yet a disciplinary investigation reveals the fruitfulness of erasing distinctions among and boundaries between established academic disciplines. This should come as no surprise. The computational turn itself is a disciplinary and no former discipline whether scientific, artistic, or humanistic has remained unchanged. Rigorous reflection on the nature of these changes opens the door to inquiry into the nature of the world, what constitutes our knowledge of it, and our understanding of our place in it. These investigations are only just beginning. The contributions to this volume make this clear; many encourage further research and end with open questions.

Hyperconnectivity and Its Discontents Rogers Brubaker, 2022-11-14 Digital hyperconnectivity is a defining fact of our time. The Silicon Valley dream of universal connection, the dream of connecting everyone and everything to everyone and everything else everywhere and all the time, is rapidly becoming a reality. In this wide-ranging and sharply argued book, Rogers Brubaker develops an original interpretive account of the pervasive and unsettling changes brought about by hyperconnectivity. He traces transformations of the self, social relations, culture, economics, and politics, giving special attention to underexplored themes of abundance, miniaturization, convenience, quantification, and discipline. He shows how hyperconnectivity prepared us for the pandemic and how the pandemic in turn has prepared us for an even more fully digitally mediated future. Throughout, Brubaker underscores the ambivalence of digital hyperconnectivity, which opens up many new and exciting possibilities yet at the same time threatens human freedom and flourishing. *Hyperconnectivity and Its Discontents* will be essential reading for everyone interested in the constellation of socio-technical forces that are profoundly remaking our world.
