

ASP.NET MVC interview questions and answers related to technical definitions and architecture

Q

What is the purpose of the Controller in the MVC pattern?

A

In the MVC pattern, the Controller acts as the intermediary between the Model and the View. It processes incoming requests, handles user input, and interacts with the Model to retrieve or update data. Once the data is processed, the Controller selects an appropriate View to render the results.

An ideal candidate should explain the Controller's role in managing the flow of data and ensuring the separation of concerns within the application. Look for answers that emphasize the Controller's importance in maintaining a clean and maintainable codebase.
