The Neural Crest in Development and Evolution Brian K. Hall,1999-07-30 A discussion of the neural crest and neural crest cells dealing with their discovery their embryological and evolutionary origins their cellular derivatives in both agnathan and jawed vertebrates or gnathostomes and the broad topics of migration and differentiation in normal development The book also considers what goes wrong when development is misdirected by mutations or by exposure of embryos to exogenous agents such as drugs alcohol or excess vitamin A and includes discussions of tumours and syndromes and birth defects involving neural crest cells *Evolving Neural Crest Cells* Brian Frank Eames, Daniel Meulemans Medeiros, Igor Adameyko, 2020-07-28 Vertebrates possess lineage specific characteristics These include paired anterior sense organs and a robust modular head skeleton built of cellular cartilage and bone All of these structures are derived at least partly from an embryonic tissue unique vertebrates the neural crest The evolutionary history of the neural crest and neural crest cells has been difficult to reconstruct This volume will use a comparative approach to survey the development of the neural crest in vertebrates and neural crest like cells across the metazoa This information will be used to reveal neural crest evolution and identify the genomic genetic and gene regulatory changes that drove them Key selling features Summarizes the data regarding neural crest cells and neural crest derivatives Uses a broad based comparative approach Suggests hypothesis that the origin of neural crest cells involved the novel co activation of ancient metazoan gene programs in neural border cells Illustrates how the emergences of neural crest made possible the diversification of vertebrate heads Inborn Errors of Development Charles J.
