the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss, with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 3 includes a total of 49 practices that have a direct impact on SOC sequestration and maintenance in cropland, grassland, integrated systems and farming approaches.

Water City Matthew Bradbury, 2020-12-30. Water City offers practical solutions to some of the environmental challenges facing 21st century cities as a result of climate change. The dense, compact nature of the contemporary city makes it difficult to generate urban resilience to the effects of climate change, particularly coastal and pluvial flooding. This book describes a design-led remediation methodology that draws on catchment planning and GIS mapping and analysis to redefine the city as a series of hydrological and ecological systems. Six case studies test the presented methodology: two greenfield and four brownfield sites based in the UK, USA, New Zealand and China. Each case study is illustrated with GIS maps and perspectives. Specific solutions to the environmental problems that will be intensified by climate change are presented. Water City describes adaptation strategies to help practitioners in the urban landscape tackle these issues and make our cities better places to live. This practical guide is a key read for professionals and stakeholders in landscape architecture, urban design, planning and all those interested in how climate change will affect the future of our cities.
