The section concludes with several position pieces and debates on the future of urban design practice. The Urbanism Reader Stefan Al, Tom Verebes, 2025-02-06. Positioning design at the center of the debate, *The Urbanism Reader* brings together classic and contemporary readings to help designers understand the complexities of cities and urban design in the 21st century. The selection of readings presented here is uniquely tailored to a design perspective for architects and urban designers, balancing social issues in urbanism with a clear focus on foregrounding design as an instrument for change in cities and examining the outcomes and challenges of recent design theories, design methods, and technologies in the built urban environment. Covering today's most urgent issues, 45 texts explore key topics in urbanism: from digital design technologies to smart cities, from the ongoing ecological crisis to public health and the impact of Covid-19, and from emergence and informality to economic inequity in global cities. Chapters cover cultural issues including diversity, indigenous knowledge, decolonization, social justice, and inclusion alongside technological developments, while a final chapter speculates on the future of urbanism through readings in AI, virtual reality, and the frontiers of current thinking in architecture and urban design. The extracts are grouped by theme, each with an introduction to the historical contexts and guiding paradigms, helping design students, researchers, and professionals to make sense of the diverse field of theory and practice in the past, present, and future of global urbanism.

Bicycles in American Highway Planning Bruce D. Epperson, 2014-11-17. The United States differs from other developed nations in the extent to which its national bicycle transportation policy relies on the use of unmodified roadways with cyclists obeying the same traffic regulations as motor vehicles. This policy, known as vehicular cycling, evolved between 1969, when the 10-speed boom saw a sharp increase in adult bicycling, and 1991, when the American Association of State Highway and Transportation Officials adopted an official policy that on-road bikeways were not desirable. This policy resulted from a growing realization by highway engineers and experienced club cyclists that they had parallel interests: the cyclists preferred to ride on highways because most bikeways were not designed for high speeds and pack riding, and the highway engineers did not want to divert funding from roadways to construct bikeways. Using contemporary magazine articles, government reports, and archival material from industry lobbying groups and national cycling organizations, this book

tells the story of how America became a nation of bicyclists without bikeways **The City Reader** Richard T.
