Guidelines from the Central-Eastern European Professional Consensus Statement on Breast Cancer Janina

Kulka, Gabor Cserni, 2022-09-01 The contributions contained in this Special Issue comprise the recommendations accepted by the Consensus Conference organized on 6-7 November 2021 in Visegrád, Hungary, and form the 1st Central Eastern European Professional Consensus Statement on Breast Cancer. The content is based on English language translations from the original Hungarian of recommendations accepted by the 4th Hungarian Consensus Conference on Breast Cancer, adjusted to include the frames of the Central Eastern European Academy of Oncology and updated by changes in practices and recommendations introduced during the nearly one year period between the two consensus conferences. Additionally, these guidelines fall within the recommendations of ESMO, NCCN and ABC5, as well as that of the St Gallen Consensus Conference statements. The guidelines cover problematics of breast cancer diagnosis, treatment and management, with specific chapters on screening, imaging and diagnostic modalities for breast tumours, pathology and reporting of breast cancer, contemporary breast cancer surgery, radiotherapy of breast cancer, systemic treatment of breast cancer, follow-up, rehabilitation and psycho-oncology. Chapters labelled with an asterisk have been substantially updated/modified following the publication of the 4th Hungarian Consensus Conference recommendations. The original guidelines may be found in full text with the Hungarian publication Magyar Onkológia 2020; 64(4): 277-398 at huon.hu.

In Situ Molecular Pathology and Co-Expression

DNA Vaccines Mark W. Saltzman,Hong Shen,Janet L. Brandsma,2008-02-02

In the early 1990s almost 200 yr after Edward Jenner demonstrated the effectiveness of the smallpox vaccine a new paradigm for vaccination emerged The conventional method of vaccination required delivery of whole pathogens or structural subunits but in this new approach DNA or genetic information was administered to elicit an immunological response Once it was observed that plasmid DNA delivered in vivo led to production of an encoded transgene 1 two ground breaking studies demonstrated that immunological responses could be generated against antigenic transgenes via plasmid DNA delivered by DNA vaccination as this approach is called 2 3 The appearance of this new vaccination strategy coincided with advances in molecular biology which provided new tools to study and manipulate the basic elements of an organism's genome and also could also be applied to the design and production of DNA vaccines DNA Vaccines is a major updated and enhancement of the first edition It reviews state of the art methods in DNA vaccine technology with chapters describing DNA vaccine design delivery systems adjuvants current applications methods of production and quality control Consistent with the approach of the Methods in Molecular Medicine series these chapters contain detailed practical procedures on the latest DNA vaccine technology The enthusiasm for DNA vaccine technology is made clear by the number of research studies published on this topic since the mid 1990s
