The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and that's what keeps the neurons. The nervous system is basically made of thousands of specialized cells called neurons, which are the basic building blocks of the nervous system.

Central Nervous System

The central nervous system, or CNS, is the part of the nervous system that is located in the brain and spinal cord. It is the most complex part of the nervous system. The brain is the control center of the body, and it is located within the protective hard skull. Layers of meninges and cerebrospinal fluid also protect the CNS. The spinal cord is made of thousands of neurons that are located in the spinal column. There are 32 segments in the spinal cord, and each segment is made of thousands of neurons that are located in the spinal cord.

Peripheral Nervous System

There are all parts of the nervous system that are not in the CNS, and they make up the peripheral nervous system, or PNS. The PNS is made up of all the neurons that are located in the rest of the body, and it is responsible for sending and receiving information from the CNS. The PNS is made up of all the neurons that are located in the rest of the body, and it is responsible for sending and receiving information from the CNS.
