Multisensor Decision And Estimation Fusion Yunmin Zhu, 2012-12-06 YUNMIN ZHU In the past two decades multi sensor or multi source information fusion techniques have attracted more and more attention in practice where observations are processed in a distributed manner and decisions or estimates are made at the individual processors and processed data or compressed observations are then transmitted to a fusion center where the final global decision or estimate is made A system with multiple distributed sensors has many advantages over one with a single sensor These include an increase in the capability reliability robustness and survivability of

the system Distributed decision or estimation fusion problems for cases with statistically independent observations or observation noises have received significant attention see Varshney's book Distributed Detection and Data Fusion New York Springer Verlag 1997 Bar Shalom's book Multitarget Multisensor Tracking Advanced Applications vol 1 3 Artech House 1990 1992 2000 Problems with statistically dependent observations or observation noises are more difficult and have received much less study In practice however one often sees decision or estimation fusion problems with statistically dependent observations or observation noises For instance when several sensors are used to detect a random signal in the presence of observation noise the sensor observations could not be statistically independent when the signal is present This book provides a more complete treatment of the fundamentals of multi sensor decision and estimation fusion in order to deal with general random observations or observation noises that are correlated across the sensors
