Neural Networks in Finance Paul D. McNelis, 2005-01-05 This book explores the intuitive appeal of neural networks and the genetic algorithm in finance. It demonstrates how neural networks used in combination with evolutionary computation outperform classical econometric methods for accuracy in forecasting classification and dimensionality reduction. McNelis utilizes a variety of examples from forecasting automobile production and corporate bond spread to inflation and deflation processes in Hong Kong and Japan to credit card default in Germany to bank failures in Texas to cap floor volatilities in New York and Hong Kong. Offers a balanced critical review of the neural network methods and genetic algorithms used in finance. Includes numerous examples and applications. Numerical illustrations use MATLAB code and the book is accompanied by a website.

Neural Networks and the Financial Markets Jimmy Shadbolt, 2012-12-06 This volume looks at financial prediction from a broad range of perspectives. It covers the economic arguments, the practicalities of the markets, how predictions are used, how predictions are made, how predictions are turned into something usable, asset locations. It combines a discussion of standard theory with state-of-the-art material on a wide range of information processing techniques as applied to cutting-edge financial problems. All the techniques are demonstrated with real examples using actual market data and show that it is possible to extract information from very noisy sparse data sets. Aimed primarily at researchers in financial prediction, time series analysis, and information processing, this book will also be of interest to quantitative fund managers and other professionals involved in financial prediction.

Neural Networks for Economic and Financial Modelling Andrea Beltratti, Sergio Margarita, Pietro Terna, 1996 The field of economics and finance is one of the few areas where the need for neural network applications is increasing. Handbook of Computational and Numerical Methods in Finance Svetlozar Todorov Rachev, 2004-06-29. Numerical methods in finance have recently emerged as a new discipline at the intersection of probability theory, finance, and numerical analysis. They bridge the gap between financial theory and computational practice and provide solutions to problems where analytical methods are often non-applicable. Numerical methods are more and more used in several topics of financial analysis: computation of complex derivatives, market credit and operational risk assessment, asset liability management, optimal portfolio theory, financial econometrics, and others. Although numerical methods in finance have been studied intensively in recent years, many theoretical and practical financial aspects have yet to be explored. This volume presents current research focusing on various numerical methods in finance. The contributions cover methodological issues: Genetic Algorithms, Neural Networks, Monte Carlo methods, Finite Difference Methods, Stochastic Portfolio Optimization, as well as the application of other numerical methods in finance and risk management. As editor, I am grateful to the contributors for their fruitful collaboration. I would particularly like to thank Stefan Trueck and Carlo Marinelli for the excellent editorial assistance received over the progress of this project. Thomas Plum did a splendid word processing job in preparing the manuscript. I owe much to George Anastassiou, Consultant Editor, Birkhauser, and Ann Kostant, Executive Editor, Mathematics and Physics, Birkhauser, for their help and encouragement.

Artificial Neural Networks in Finance and Manufacturing Joarder Kamruzzaman, Rezaul Begg, Ruhul A. Sarker, 2006. This book presents a variety of practical applications of neural networks in two important domains of economic activity: finance and manufacturing. Provided by publisher.

Neural Networks for Financial Forecasting Edward Gately, 1995-10-06. Succinctly explains how neural networks function, what they can accomplish, as well as how to use, construct, and apply them for maximum profit. Selecting what is to be predicted and choosing proper inputs, deciding on the best network architecture, training, and algorithms are among the topics discussed. Highlights examples of successful networks. Numerous graphs and spreadsheets are used to illustrate concepts. The appendix features lists of neural network suppliers, useful publications, and more.
