New Waves in Philosophical Logic G. Restall, G. Russell, 2012-07-31 Philosophical logic has been and continues to be a driving force behind much progress and development in philosophy more broadly This collection by up and coming philosophical logicians deals with a broad range of topics including for example proof theory probability context sensitivity dialetheism and dynamic semantics New Waves in Philosophical Logic G. Restall, G. Russell, 2012-07-31 Philosophical logic has been and continues to be a driving force behind much progress and development in philosophy more broadly This collection by up and coming philosophical logicians deals with a broad range of topics including for example proof theory probability context sensitivity dialetheism and dynamic semantics New Waves in Philosophy of Mathematics O. Bueno, Ø. Linnebo, 2009-09-29 Thirteen promising young researchers write on what they take to be the right philosophical account of mathematics and discuss where the philosophy of mathematics ought to be going New trends are revealed such as an increasing attention to mathematical practice a reassessment of the canon and inspiration from philosophical logic **Logic in Question** Jean-Yves Béziau, Jean-Pierre Desclés, Amirouche Moktefi, Anca Christine Pascu, 2023-01-11 This contributed volume collects papers related to the Logic in Question workshop which has taken place annually at Sorbonne University in Paris since 2011 Each year the workshop brings together historians philosophers mathematicians linguists and computer scientists to explore questions related to the nature of logic and how it has developed over the years As a result chapter authors provide a thorough interdisciplinary exploration of topics that have been studied in the workshop Organized into three sections the first part of the book focuses on historical questions related to logic the second explores philosophical questions and the third section is dedicated to mathematical discussions Specific topics include logic and analogy Chinese logic nineteenth century British logic in particular Boole and Lewis Carroll logical diagrams the place and value of logic in Louis Couturat's philosophical thinking contributions of logical analysis for mathematics education the exceptionality of logic the logical expressive power of natural languages the unification of mathematics via topos theory Logic in Question will appeal to pure logicians historians of logic philosophers linguists and other researchers interested in the history of logic making this volume a unique and valuable contribution to the field Gödel's Disjunction Leon Horsten, Philip Welch, 2016-09-08 The logician Kurt Gödel in 1951 established a disjunctive thesis about the scope and limits of mathematical knowledge either the mathematical mind is not equivalent to a Turing machine i.e. a computer or there are absolutely undecidable mathematical problems In the second half of the twentieth century attempts have been made to arrive at a stronger conclusion In particular arguments have been produced by the philosopher J.R. Lucas and by the physicist and mathematician Roger Penrose that intend to show that the mathematical mind is more powerful than any computer These arguments and counterarguments to them have not convinced the logical and philosophical community The reason for this is an insufficiency of rigour in the debate The contributions in this volume move the debate forward by formulating rigorous

frameworks and formally spelling out and evaluating arguments that bear on Gettier's disjunction in these frameworks. The contributions in this volume have been written by world leading experts in the field.

The Routledge Companion to Epistemology Sven Bernecker, Duncan Pritchard, 2011-01-19. Epistemology, the philosophy of knowledge, is at the core of many of the central debates and issues in philosophy, interrogating the notions of truth, objectivity, trust, belief, and perception. The Routledge Companion to Epistemology provides a comprehensive and the up to date survey of epistemology, charting its history, providing a thorough account of its key thinkers and movements, and addressing enduring questions and contemporary research in the field. Organized thematically, the Companion is divided into ten sections: Foundational Issues, The Analysis of Knowledge, The Structure of Knowledge, Kinds of Knowledge, Skepticism, Responses to Skepticism, Knowledge and Knowledge Attributions, Formal Epistemology, The History of Epistemology, and Metaepistemological Issues. Seventy-eight chapters, each between 5000 and 7000 words and written by the world's leading epistemologists, provide students with an outstanding and accessible guide to the field. The Philosophy of Philosophy Timothy Williamson, 2021-09-27. The Philosophy of Philosophy. The Blackwell Brown Lectures in Philosophy. The Philosophy of Philosophy presents an original unified concept of philosophy as a non-natural science. evolving from non philosophical pursuits Williamson provides readers with fresh insight into the self image of philosophy and offers new ways of understanding what philosophy is and how it actually works Now in its second edition this landmark volume comprises the original book and the author s subsequent work New topics include the recent history of analytic philosophy assessments of experimental philosophy theories of concepts and understanding Wittgensteinian approaches popular philosophy naturalism morally loaded examples in philosophy philosophical applications of scientific methods and many more This edition features the author s latest thoughts on a variety of issues autobiographical reflections and replies to critics The Philosophy of Philosophy Second Edition remains essential reading for philosophers scholars graduate and advanced undergraduate students in philosophy and other readers with a sustained interest in the method and rationale of the doing of philosophy

Metaphysics, Sophistry, and Illusion Mark Balaguer, 2021-01-26 Metaphysics Sophistry and Illusion does two things First it introduces a novel kind of non factualist view and argues that we should endorse views of this kind in connection with a wide class of metaphysical questions most notably the abstract object question and the composite object question More specifically Mark Balaguer argues that there s no fact of the matter whether there are any such things as abstract objects or composite objects or material objects of any other kind Second Metaphysics Sophistry and Illusion explains how these non factualist views fit into a general anti metaphysical view called neo positivism and explains how we could argue that neo positivism is true Neo positivism is the view that every metaphysical question decomposes into some subquestions call them Q1 Q2 Q3 etc such that for each of these subquestions one of the following three anti metaphysical views is true of it non factualism or scientism or metaphysically innocent modal truth ism These three views can be defined very roughly as follows non factualism about a question Q is the view that there s no fact of the matter about the answer to Q Scientism about Q is the view that Q is an ordinary empirical scientific question about some contingent aspect of physical reality and Q can t be settled with an a priori philosophical argument And metaphysically innocent modal truth ism about Q is the view that Q asks about the truth value of a modal sentence that s metaphysically innocent in the sense that it doesn t say anything about reality and if it s true isn t made true by reality

Cosmological Fine-Tuning Arguments Jason

Waller, 2019-09-05 If the physical constants initial conditions or laws of nature in our universe had been even slightly different then the evolution of life would have been impossible This observation has led many philosophers and scientists to ask the natural next question why is our universe so fine tuned for life The debates around this question are wide ranging multi disciplinary complicated technical and at times heated This study is a comprehensive investigation of these debates and the many metaphysical and epistemological questions raised by cosmological fine tuning Waller s study reaches two significant and controversial conclusions First he concludes that the criticisms directed at the multiverse hypothesis by theists and at the theistic hypothesis by naturalists are largely unsuccessful Neither of these options can plausibly be excluded Choosing between them seems to turn on primitive and so hard to justify metaphysical intuitions Second in order to

break the philosophical deadlock Waller moves the debate from the level of universes to the level of possible worlds Arguing that possible worlds are also fine tuned in an important and interesting sense Waller concludes that the only plausible explanation for the fine tuning of the actual world is to posit the existence of some kind of God like thing A Critical Introduction to Scientific Realism Paul Dicken,2016-07-28 What are the reasons for believing scientific theories to be true The contemporary debate around scientific realism exposes questions about the very nature of scientific knowledge A Critical Introduction to Scientific Realism explores and advances the main topics of the debate allowing epistemologists to make new connections with the philosophy of science Moving from its origins in logical positivism to some of the most recent issues discussed in the literature this critical introduction covers the no miracles argument the pessimistic meta induction and structural realism Placing arguments in their historical context Paul Dicken approaches scientific realism debate as a particular instance of our more general epistemological investigations The recurrent theme is that the scientific realism debate is in fact a pseudo philosophical question Concerned with the methodology of the scientific realism debate Dicken asks what it means to offer an epistemological assessment of our scientific practices Taking those practices as a guide to our epistemological reflections A Critical Introduction to Scientific Realism fills a gap in current introductory texts and presents a fresh approach to understanding a crucial debate Toward Predicate Approaches to Modality Johannes Stern,2015-10-20 In this volume the author investigates and argues for a particular answer to the question What is the right way to logically analyze modalities from natural language within formal languages The answer is by formalizing modal expressions in terms of predicates But as in the case of truth the most intuitive modal principles lead to paradox once the modal notions are conceived as predicates The book discusses the philosophical interpretation of these modal paradoxes and argues that any satisfactory approach to modality will have to face the paradoxes independently of the grammatical category of the modal notion By systematizing modal principles with respect to their joint consistency and inconsistency Stern provides an overview of the options and limitations of the predicate approach to modality that may serve as a useful starting point for future work on predicate approaches to modality Stern also develops a general strategy for constructing philosophically attractive theories of modal notions conceived as predicates The idea is to characterize the modal predicate by appeal to its interaction with the truth predicate This strategy is put to use by developing the modal theories Modal Friedman Sheard and Modal Kripke Feferman Oxford Studies in Epistemology Volume 6 Tamar Szabó Gendler,John Hawthorne,2019-01-10 Oxford Studies in Epistemology is a biennial publication which offers a regular snapshot of state of the art work in this important field Under the guidance of a distinguished editorial board composed of leading philosophers in North America Europe and Australasia it publishes exemplary papers in epistemology broadly construed Topics within its purview include traditional epistemological questions concerning the nature of belief justification and knowledge the status of scepticism the nature of the a priori etc new developments in epistemology including movements such as naturalized epistemology feminist

epistemology social epistemology and virtue epistemology and approaches such as contextualism foundational questions in decision theory confirmation theory and other branches of philosophy of science that bear on traditional issues in epistemology topics in the philosophy of perception relevant to epistemology topics in cognitive science computer science developmental cognitive and social psychology that bear directly on traditional epistemological questions work that examines connections between epistemology and other branches of philosophy including work on testimony and the ethics of belief

Choosing Normative Concepts Matti Eklund, 2017-08-11 Theorists working on metaethics and the nature of normativity typically study goodness rightness what ought to be done and so on In their investigations they employ and consider our actual normative concepts But the actual concepts of goodness rightness and what ought to be done are only some of the possible normative concepts there are There are other possible concepts ascribing different properties Matti Eklund explores the consequences of this thought for example for the debate over normative realism and for the debate over what it is for concepts and properties to be normative Conceptual engineering the project of considering how our concepts can be replaced by better ones has become a central topic in philosophy Eklund applies this methodology to central normative concepts and discusses the special complications that arise in this case For example since talk of improvement is itself normative how should we in the context understand talk of a concept being better

Just Financial Markets? Lisa Herzog, 2017-04-07 Well functioning financial markets are crucial for the economic well being and the justice of contemporary societies The Great Financial Crisis has shown that a perspective that naively trusts in the self regulating powers of free markets cannot capture what is at stake in understanding and regulating financial markets The damage done by the Great Financial Crisis including its distributive consequences raises serious questions about the justice of financial markets as we know them This volume brings together leading scholars from political theory law and economics in order to explore the relation between justice and financial markets Broadening the perspective from a purely economic one to a liberal egalitarian one the volume explores foundational normative questions about how to conceptualize justice in relation to financial markets the biases in the legal frameworks of financial markets that produce unjust outcomes and perspectives of justice on specific institutions and practices in contemporary financial markets Written in a clear and accessible language the volume presents analyses of how financial markets should function and how the Great Financial Crisis came about proposals for how the structures of financial markets could be reformed and analysis of why reform is not happening at the speed that would be desirable from a perspective of justice

Everything, more or less J. P. Studd, 2019-04-04 Almost no systematic theorizing is generality free Scientists test general hypotheses set theorists prove theorems about every set metaphysicians espouse theses about all things regardless of their kind But how general can we be and do we ever succeed in theorizing about absolutely everything Not according to generality relativism In its most promising form this kind of relativism

maintains that what everything and other quantifiers encompass is always open to expansion no matter how broadly we may generalize a more inclusive everything is always available The importance of the issue comes out in part in relation to the foundations of mathematics Generality relativism opens the way to avoid Russell s paradox without imposing ad hoc limitations on which pluralities of items may be encoded as a set On the other hand generality relativism faces numerous challenges What are we to make of seemingly absolutely general theories What prevents our achieving absolute generality simply by using everything unrestrictedly How are we to characterize relativism without making use of exactly the kind of generality this view foresees This book offers a sustained defence of generality relativism that seeks to answer these challenges Along the way the contemporary absolute generality debate is traced through diverse issues in metaphysics logic and the philosophy of language some of the key works that lie behind the debate are reassessed an accessible introduction is given to the relevant mathematics and a relativist friendly motivation for Zermelo Fraenkel set theory is developed Art and Abstract Objects Christy Mag Uidhir,2013-01-17 Art and Abstract Objects presents a lively philosophical exchange between the philosophy of art and the core areas of philosophy The standard way of thinking about non repeatable single instance artworks such as paintings drawings and non cast sculpture is that they are concrete i e material causally efficacious located in space and time Da Vinci s Mona Lisa is currently located in Paris Richard Serra s Tilted Arc is 73 tonnes of solid steel Johannes Vermeer s The Concert was stolen in 1990 and remains missing Michaelangelo s David was attacked with a hammer in 1991 By contrast the standard way of thinking about repeatable multiple instance artworks such as novels poems plays operas films symphonies is that they must be abstract i e immaterial causally inert outside space time consider the current location of Melville s Moby Dick the weight of Yeats Sailing to Byzantium or how one might go about stealing Puccini s La Boh me or vandalizing Mozart s Piano Concerto No 9 Although novels poems and symphonies may appear radically unlike stock abstract objects such as numbers sets and propositions most philosophers of art think that for the basic intuitions practices and conventions surrounding such works to be preserved repeatable artworks must be abstracta This volume examines how philosophical enquiry into art might itself productively inform or be productively informed by enquiry into abstracta taking place within not just metaphysics but also the philosophy of mathematics epistemology philosophy of science and philosophy of mind and language While the contributors chiefly focus on the relationship between philosophy of art and contemporary metaphysics with respect to the overlap issue of abstracta they provide a methodological blueprint from which scholars working both within and beyond philosophy of art can begin building responsible mutually informative and productive relationships between their respective fields *Time Travel* Nikk Effingham,2020-02-20 There are various arguments for the metaphysical impossibility of time travel Is it impossible because objects could then be in two places at once Or is it impossible because some objects could bring about their own existence In this book Nikk Effingham contends that no such argument is sound and that time travel is metaphysically possible His main

focus is on the Grandfather Paradox the position that time travel is impossible because someone could not go back in time and kill their own grandfather before he met their grandmother In such a case Effingham argues that the time traveller would have the ability to do the impossible so they could kill their grandfather even though those impossibilities will never come about so they won't kill their grandfather He then explores the ramifications of this view discussing issues in probability and decision theory The book ends by laying out the dangers of time travel and why even though no time machines currently exist we should pay extra special care ensuring that nothing no matter how small or microscopic ever travels in time

Artificial Intelligence, Humans and the Law Henrik Palmer Olsen, Jacob Livingston Slosser, Salome Addo Ravn, Johan Eddebo, Jonas Hultin Rosenberg, 2025-10-31 This book takes up the contentious issue of artificial intelligence AI and more specifically the evolving nature of AI mindedness as a legal entity in society With the increasing potential of AI suggested by the recent surge in creative and administrative tools and large language models there is a growing concern about the ethical and legal implications of incorporating AI into society As these systems become even more powerful and their ability to mimic human output grows the question of whether and how to attribute mental states to AI even in its most nascent form has become a pressing concern It is for example unclear what kind of mind AI might be capable of and therefore what the proper legal analogy might be for how we attribute reasoning capability intent responsibility liability agency and so on to it This book contributes to this new and important area by bringing together front line research from diverse fields on the topic of understanding AI mindedness and how it and our relationship to it might be regulated Through a collection of chapters written by experts from law public administration tort psychoanalysis philosophy linguistics computer science and political theory this volume offers an insightful examination of current research theoretical frameworks and practical applications that are shaping the AI human relationship This book will be of considerable interest to scholars and researchers working in legal theory socio legal studies law and technology and science and technology studies
