Standards & Objectives

Addressed in Sound Energy

Overarching Question: How does sound energy travel?

Standard Addressed:
4-PS3-2 Make observations to provide evidence that energy can be from place to place by sound, light, heat, and electric currents.

Objectives:

Station 1
To make observations and provide evidence that a sound is a vibration.

Station 2
To make observations and provide evidence that sound travels in all directions.

To understand that sound waves travel occur through compression and rarefaction.

Station 3
To make observations and find evidence that increasing force/energy increases the amplitude.

To make observations and find evidence that when sound waves travel through less dense materials and that sound bounces off flat surfaces better than bumpy and/or rough surfaces.

To make observations and find evidence that sound travels best through liquids, and worst through gases.

Pacing Guide

Suggested Order of Instruction - Energy

9-11 weeks

In the first six weeks, students engage and explore four types of energy activities. These activity-based units can be taught in any order.

Sound 5-6 days

Students explore sound energy in six hands-on stations:

1. What is sound?
2. How does sound travel?
3. What is amplitude?
4. What is pitch?
5. Which materials conduct and insulate sound?
6. Does sound travel better through solids, liquids, or gases?

Light 5-6 days

Students explore light energy in six hands-on stations:

1. How does light travel?
2. Which materials are transparent, translucent, and opaque?
3. Which materials reflect light?
4. What is refraction?
5. What is color?
6. Light Reading

Heat 8-11 days

Students work in small groups to complete eight hands-on activities:

1. What is heat?
2. How does heat travel?
3. What is conduction?
4. What is convection?
5. What is radiation?
6. What materials insulate and conduct heat?
7. How does heat change matter?
8. How do we measure heat?

Next Generation Science Pacing Guide Grade 1:

Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners Cheryll M. Adams, Alicia Cotabish, Debbie Dailey, 2021-09-23 A Teacher's Guide to Using the Next Generation Science Standards With Gifted and Advanced Learners provides teachers and administrators with practical examples of ways to build comprehensive coherent and rigorous science learning experiences for gifted and advanced students from kindergarten to high school. It provides an array of examples across the four domains of science: physical sciences, Earth and space sciences, life sciences, and engineering technology and applications of science. Each learning experience indicates the performance expectation addressed and includes a sequence of activities, implementation examples, connections to the CCSS Math and CCSS ELA, and formative assessments. Chapters on specific instructional and management strategies, assessment, and professional development suggestions for implementing the standards within the classroom will be helpful for both teachers and administrators.

Helping Students Make Sense of the World Using Next Generation Science and Engineering Practices Christina V. Schwarz, Cynthia Passmore, Brian J. Reiser, 2017-01-31 When it's time for a game change, you need a guide to the new rules. *Helping Students Make Sense of the World Using Next Generation Science and Engineering Practices* provides a play-by-play understanding of the practices strand of A Framework for K-12 Science Education Framework and the Next Generation Science Standards (NGSS). Written in clear, nontechnical language, this book provides a wealth of real-world examples to show you what's different about practice-centered teaching and learning at all grade levels. The book addresses three important questions: 1. How will engaging students in science and engineering practices help improve science education? 2. What do the eight practices look like in the classroom? 3. How can educators engage students in practices to bring the NGSS to life? *Helping Students Make Sense of the World Using Next Generation Science and Engineering Practices* was developed for K-12 science teachers, curriculum developers, teacher educators, and administrators. Many of its authors contributed to the Framework's initial vision and tested their ideas in actual science classrooms. If you want a fresh game plan to help students work together to generate and revise knowledge, not just receive and repeat information, this book is for you.

Planning Science Instruction for Emergent Bilinguals Edward G. Lyon, Kelly M. Mackura, 2023 This practical resource takes educators through a planning process from selecting standards to designing learning activities that weaves together language literacy and science in ways that are responsive to emergent bilinguals. Drawing on extensive and current research, the authors show how secondary educators can use students' own language and lived experiences coupled with authentic science practices to provide rich and relevant language support. Using a science unit as a shared text, readers will learn how to gather rich knowledge about emergent bilinguals, unpack the ideas and language demands of Next Generation Science Standards, strategically embed language and literacy standards in the curriculum, and sequence learning activities around an anchoring phenomenon, a text, and an assessment. In the process, readers will come away with a repertoire of planning tools.

and examples of how to support emergent bilinguals in using language to collaborate with others and to interpret and produce texts that are central to learning and doing science Planning Science Instruction for Emergent Bilinguals blends theory and practice so readers understand both how and why this planning process can be used to disrupt social inequity for emergent bilinguals Book Features Describes intentional decisions that educators can make when planning a science unit or learning experience Shows how to weave together Next Generation Science Standards Common Core English Language Arts Standards and language development Provides a model unit about kelp forest ecosystems to illustrate how theory is translated into practice Demonstrates how to use emergent bilinguals assets linguistic skills family experiences personal interests to create engaging science instruction Provides a set of planning tools including both blank templates and completed examples to guide educators through the planning process

Systems for Instructional Improvement Paul Cobb,Kara Jackson,Erin Henrick,Thomas M. Smith,2020-01-15 In Systems for Instructional Improvement Paul Cobb and his colleagues draw on their extensive research to propose a series of specific empirically grounded recommendations that together constitute a theory of action for advancing instruction at scale The authors outline the elements of a coherent instructional system describe productive practices for school leaders in supporting teachers growth and discuss the role of district leaders in developing school level capacity for instructional improvement Based on the findings of an eight year research practice partnership with four large urban districts investigating their efforts to enhance middle school math instruction the authors seek to bridge the gap between the literature on improving teaching and learning and the literature on policy and leadership They look at the entire education system and make recommendations on improvement efforts with a focus on student learning and teachers instructional vision In particular the authors offer insights on the interplay among various supports for teacher learning including pullout professional development coaching collaborative inquiry the most instructionally productive uses of principals time and the tensions that tend to emerge at the district level They provide a guide for district level leaders in organizing their work to support significant teacher learning Systems for Instructional Improvement provides an invaluable resource for school and district leaders while outlining a clearly focused agenda for future research
