Nice Book Fossil Capital Steam Power Global Warming:

Fossil Capital Andreas Malm, 2016-01-12 The more we know about the catastrophic implications of climate change the more fossil fuels we burn How did we end up in this mess In this masterful new history Andreas Malm claims it all began in Britain with the rise of steam power But why did manufacturers turn from traditional sources of power notably water mills to an engine fired by coal Contrary to established views steam offered neither cheaper nor more abundant energy but rather superior control of subordinate labour Animated by fossil fuels capital could concentrate production at the most profitable sites and during the most convenient hours as it continues to do today Sweeping from nineteenth century Manchester to the emissions explosion in China from the original triumph of coal to the stalled shift to renewables this study hones in on the burning heart of capital and demonstrates in unprecedented depth that turning down the heat will mean a radical overthrow of the current economic order

Energy and Climate Change Michael Stephenson, 2018-03-20 Energy and Climate Change An Introduction to Geological Controls Interventions and Mitigations examines the Earth system science context of the formation and use of fossil fuel resources and the implications for climate change It also examines the historical and economic trends of fossil fuel usage and the ways in which these have begun to affect the natural system i e the start of the Anthropocene Finally the book examines the effects we might expect in the future looking at evidence from the deep time past and looks at ways to mitigate climate change by using negative emissions technology e g bioenergy and carbon capture and storage BECCS but also by adapting to perhaps a higher than two degree world particularly in the most vulnerable developing countries Energy and Climate Change is an essential resource for geoscientists climate scientists environmental scientists and students as well as policy makers energy professionals energy statisticians energy historians and economists Provides an overarching narrative linking Earth system science with an integrated approach to energy and climate change Includes a unique breadth of coverage from modern to deep time climate change from resource geology to economics from climate change mitigation to adaptation and from the industrial revolution to the Anthropocene Readable accessible and well illustrated giving the reader a clear overview of the topic

werdenden Ressourcen und Versorgung mit Energietr gern aussehen kann Interpreting Energy at Museums and Historic Sites Leah S. Glaser, 2022-12-13 Experts all agree that human beings can mitigate climate change by changing how we use energy for heat light movement and production Stewards of heritage sites and collections can engage the public at the grassroots level to raise awareness about the cultural and socioeconomic reasons for past choices that have contributed to climate change This book will help cultural institutions identify ways to interpret new stories through historic places and resources especially if staff have made the commitment to go green Without place based context discussions about energy focus primarily on the science and not the human experience By reminding us of our past practices and values regarding energy production and use historic places can inspire different ways of thinking about transitioning to different energy sources and question the doctrine that high energy use is necessary for progress Public interpretation can expose the vast energy infrastructure and the impact of energy extraction production and use on place Historic sites offer place based contexts for visitors to interact with and think critically about the processes and the impact of energy development in for example a maritime village This book synthesizes science with the humanities outside of popular media and other politicized spaces to identify different kinds of energy resources in many historic collections or sites It supplements current calls for economic and policy changes because as stewards of historic places we need to do what we can in this all hands on deck moment to prepare for shared stewardship of our future **The Nutmeg's Curse** Amitav Ghosh, 2022-09-07 The Nutmeg's Curse Parables for a Planet in Crisis frames climate change and the Anthropocene as the culmination of a history that begins with the discovery of the New World and of the sea route to the Indian Ocean Ghosh makes the case that the political dynamics of climate change today are rooted in the centuries old geopolitical order that was constructed by Western colonialism This argument is set within a broader narrative about human entanglements with botanical matter spices tea sugarcane opium and fossil fuels and the continuities that bind human history with these earthly materials Ghosh also writes explicitly against the backdrop of the COVID 19 pandemic the Black Lives Matter protests and international immigration debates among other pressing issues framing these ongoing crises in a new way by showing how the colonialist extractive mindset is directly connected to the deep inequality we see around us today Handbook of the Philosophy of Climate Change Gianfranco Pellegrino, Marcello Di Paola, 2023-11-24 This Handbook offers a broad yet unified treatment of many philosophical issues connected with climate change ranging from foundational puzzles to detailed applications It extends to many branches of philosophy that are relevant to the understanding of the premises and implications of the impacts of climate change on human and nonhuman life on Earth More specifically the handbook examines the scientific accounts of climate change as well as its causes It explores the tools offered by social sciences and humanities to study the societal premises and impacts of climate change as well as delving deeper into the ethical and political issues connected with and resulting from climate change By doing so it puts it all in an ecological and historical context In addition the book offers

solutions to some important philosophical puzzles and problems and indicates paths of interaction between philosophy and other disciplines The discussion about climate change and the mitigation adaptation policies spans many areas and levels from abstract science and philosophy to current on the ground politics However climate change is also a great a philosophical puzzle Indeed its existential and practical relevance can be thought to largely derive from the philosophical complications it engenders Climate change is applied philosophy par excellence Preventing dangerous anthropogenic climate change needs very good philosophy applied to concrete and specific practical issues Climate change is an area where scholars from very different provenances should cooperate on equal terms having in view a common and really important purpose contribute to preventing great burdens and even the extinction of humankind and the destruction of hospitable and valuable non human nature

Karl Marx in America Andrew Hartman, 2025-05-27 The vital and untold story of Karl Marx's stamp on American life To read Karl Marx is to contemplate a world created by capitalism People have long viewed the United States as the quintessential anti Marxist nation but Marx's ideas have inspired a wide range of people to formulate a more precise sense of the stakes of the American project Historians have highlighted the imprint made on the United States by Enlightenment thinkers such as Adam Smith John Locke and Thomas Paine but Marx is rarely considered alongside these figures Yet his ideas are the most relevant today because of capitalism's centrality to American life In *Karl Marx in America* historian Andrew Hartman argues that even though Karl Marx never visited America the country has been infused shaped and transformed by him Since the beginning of the Civil War Marx has been a specter in the American machine During the Gilded Age socialists read Marx as an antidote to the unchecked power of corporations In the Great Depression communists turned to Marx in hopes of transcending the destructive capitalist economy The young activists of the 1960s were inspired by Marx as they gathered to protest an overseas war Marx's influence today is evident too as Americans have become increasingly attuned to issues of inequality labor and power After decades of being pushed to the far left corner of intellectual thought Marx's ideologies have crossed over into the mainstream and are more alive than ever Working class consciousness is on the rise and as Marx argued the future of a capitalist society rests in the hands of the people who work at the point of production A valuable resource for anyone interested in Marx's influence on American political discourse *Karl Marx in America* is a thought provoking account of the past present and future of his philosophies in American society

The Routledge Handbook of Transformative Global Studies S. A. Hamed Hosseini, James Goodman, Sara C. Motta, Barry K. Gills, 2020-06-09 The *Routledge Handbook of Transformative Global Studies* provides diverse and cutting edge perspectives on this fast changing field For 30 years the world has been caught in a long global interregnum plunging from one crisis to the next and witnessing the emergence of new vibrant multiple and sometimes contradictory forms of popular resistance and politics This global interregnum or a period of uncertainty where the old hegemony is fading and the new ones have not yet been fully realized necessitates critical self reflection brave intellectual speculation and unlearning of perceived wisdoms

and greater transdisciplinary collaboration across theories localities and subjects This Handbook takes up this challenge by developing fresh perspectives on globalization development neoliberalism capitalism and their progressive alternatives addressing issues of democracy power inequality insecurity precarity wellbeing education displacement social movements violence and war and climate change Throughout it emphasizes the dynamics for system change including bringing post capitalist feminist de colonial and other critical perspectives to support transformative global praxis This volume brings together a mixture of fresh and established scholars from across disciplines and from a range of both Northern and Southern contexts Researchers and students from around the world and across the fields of politics sociology international development international relations geography economics area studies and philosophy will find this an invaluable and fresh guide to global studies in the 21st century

Ecomobilities Michael W. Pesses, 2021-10-19 Ecomobilities examines the ideological connections between automobiles the environment and the end of the world focusing on the car's inseparability from modern life Through popular films addressing both mobilities and environmental disasters Ecomobilities reveals how American automobility has influenced responses to warming temperatures and shifting ecosystems

Rich Crime, Poor Crime Colin Webster, 2023-03-16 An important and challenging book comprehensively spanning across the establishment of power systems Rich Crime Poor Crime is a vital read for academics professionals and those interested in the fields of history sociology criminology and politics

Carbon Criminals, Climate Crimes Ronald C. Kramer, 2020-04-17 Carbon Criminals Climate Crimes analyzes climate change from a criminological perspective Four state corporate crimes are examined continued extraction of fossil fuels and rising carbon emissions political omission related to the mitigation of emissions socially organized denial and climate crimes of empire The final chapter reviews policies to achieve climate justice

Young People and Thinking Technologies for the Anthropocene Peter Kraftl, Peter Kelly, Diego Carbajo Padilla, Rosalyn Black, Seth Brown, Anoop Nayak, 2022-09-26 This collection which is a companion volume to Young People and Stories for the Anthropocene Kelly et al 2022 aims to find to explore and to co produce ways of staying with the trouble Haraway 2016 that are disruptive of orthodoxies in childhood and youth studies and productive of new ways of thinking and of being and becoming in the circumstances that we young and old find ourselves in Circumstances that have problematically been identified as the Anthropocene and which have been characterised as being situated at the convergence of the climate crisis the 6th mass extinction and the ongoing crises of global capitalism as earth system Braidotti 2019 Moore 2015 The collection emerges in part and among other things around three key challenges First how can childhood and youth studies tell stories about the less obviously bounded obviously crafted obviously engineered material stuff that humans create and that circulates stuff like plastics chemicals and the scattered remnants of past industrial endeavour Second the need to experiment with diverse modes of representation with differently mediated technologies and modes of telling that from digital film platforms to children's non fiction writing expand our lexicon in terms of how it might become possible to narrate

young people in and the Anthropocene Third the need to articulate different tools for working with young people in the Anthropocene Tools and technologies understood in this manner are modes of becoming attuned to and of making new configurations of human and non human new and pressing threats that weigh upon young people in visceral affective ways and new modes of speculating about and becoming responsible for futures human and more than human In this sense the contributions to the collection from scholars from the Anglo and non Anglosphere are framed by an urgency to develop and deploy innovative critical and disruptive theoretical and methodological tools and technologies to identify and explore the material temporal and conceptual challenges for children and young people and those who research in childhood and youth studies at this convergence

Australia in AUKUS Erik Paul, 2024-05-13 This book focuses on the making and implication of AUKUS for Australians in their relations with their own state and governance the Asia Pacific region and the rest of the world AUKUS is an incipient military state and a highly dangerous development moving rapidly to integrate society the state and the economy in the US imperial project of warfare and global domination It constitutes the crucible of a Leviathan state militarising climate change The study in this book is framed in a geopolitical analytical paradigm of revolutionary and counterrevolutionary movement and power energising together the existential threat of climate change to humans and capitalism questioning the viability of the nation state system highlighting the predicament confronting Australians as a nation The book s analysis is presented in four chapters broadly indicated in the contents page The book s architecture is framed in the political philosophy and intellectual legacy of Eric Hobsbawm Rosa Luxemburg and George Orwell and their contribution to the understanding of the contradictions of the nation state and imperialism capitalism and socialism in the emancipation of humanity from war

The Creation of Wealth and Poverty Hassan Bougrine, 2016-11-25 The Creation of Wealth and Poverty is a study of the means and ways by which wealth and poverty are created in both developed and developing countries It puts a particular emphasis on the role played by economic policy in shaping the stratification of modern societies through specific programmes dealing with issues of job creation poverty and environmental degradation This book is concerned with the social effects of the ongoing crisis in finance development and the environment By focusing on the political legal and financial institutions that govern society and the economy the book provides an analysis of wealth and poverty from a historical perspective It shows how economic and social policies of the neoliberal model have led to a rise in unemployment poverty and inequality and therefore made societies more polarized This volume will be of great interest to policymakers academics and students who study political economy development economics and macroeconomics

Dying for Capitalism Charles Derber, Suren Moodliar, 2023-07-24 This is an original accessible book for scholars students activists and the general public on the greatest crisis the world has faced The authors challenge the widespread notion that a green and peaceful set of technological reforms in the current economic and political system perhaps a green capitalism can prevent disaster Dying for Capitalism analyzes the triangle of extinction that links capitalism environmental destruction and

militarism as a system that cannot sustain life on the planet The authors analyze how the extinction triangle evolved historically how it functions globally as integral to the world capitalist order and how the United States has become the dominant extinction nation They also show how recent anti democratic and anti scientific cultural and political forces intensify denial of the threat and subordinate health and survival to profit and extreme concentrated power The book offers a slender path of social and political transformation that can prevent catastrophe The path requires moving beyond current ruling systems But possibilities of survival arise from action at local state regional and global levels through multiple strategies and movements that already exist The authors draw on the history of abolitionism and emancipation from slavery in the United States to show how a system that appears unchangeable can be transformed while describing organizations movements and practices that are models of hope and a shift from the triangle of extinction to the circle of creation

Climate Change as Class War Matthew T. Huber, 2022-05-10 How to build a movement to confront climate change The climate crisis is not primarily a problem of believing science or individual carbon footprints it is a class problem rooted in who owns controls and profits from material production As such it will take a class struggle to solve In this ground breaking class analysis Matthew T Huber argues that the carbon intensive capitalist class must be confronted for producing climate change Yet the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge For an alternative strategy he proposes climate politics that appeals to the vast majority of society the working class Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform In the end as in classical socialist movements of the early 20th Century winning the climate struggle will need to be internationalist based on a form of planetary working class solidarity *Contemporary Sociological Theory and Its Classical Roots* George

Ritzer, Jeffrey Stepnisky, 2022-04-29 *Contemporary Sociological Theory and Its Classical Roots* The Basics is a brief survey of sociology s major theorists and theoretical approaches from the Classical founders to the present The content is adapted from Ritzer Stepnisky *Sociological Theory* and the authors connect many theorists together into chapters with broad headings Contemporary Integrative Theories Contemporary Theories of Everyday Life etc that offer students a big picture synthesized view of sociological theory Because of its size price and flexible organization the text can be used in a variety of undergraduate sociological theory classes Classical Contemporary or Combined *Free Gifts* Alyssa Battistoni, 2025-08-19 A timely new critique of capitalism s persistent failure to value nature Capitalism is typically treated as a force for relentless commodification Yet it consistently fails to place value on vital aspects of the nonhuman world whether carbon emissions or entire ecosystems In *Free Gifts* Alyssa Battistoni explores capitalism s persistent failure to value nature arguing that the key question is not the moral issue of why some kinds of nature shouldn t be commodified but the economic puzzle of why they haven t been To understand contemporary ecological problems from biodiversity collapse to climate change she contends we

have to understand how some things come to have value under capitalism and how others do not To help us do so Battistoni recovers and reinterprets the idea of the free gift of nature used by classical economic thinkers to describe what we gratuitously obtain from the natural world and builds on Karl Marx's critique of political economy to show how capitalism fundamentally treats nature as free for the taking This novel theory of capitalism's relationship to nature not only helps us understand contemporary ecological breakdown but also casts capitalism's own core dynamics in a new light Battistoni addresses four different instances of the free gift in political economic thought each in a specific domain natural agents in industry pollution in the environment reproductive labor in the household and natural capital in the biosphere In so doing she offers new readings of major twentieth century thinkers including Friedrich Hayek Simone de Beauvoir Garrett Hardin Silvia Federici and Ronald Coase Ultimately she offers a novel account of freedom for our ecologically troubled present developing a materialist existentialism to argue that capitalism limits our ability to be responsible for our relationships to the natural world and imagining how we might live freely while valuing nature's gifts

Energy and Change Clayton Crockett, 2022-09-27 As humanity continues to consume planetary resources at an unsustainable rate we require not only new and renewable forms of energy but also new ways of understanding energy itself Clayton Crockett offers an innovative philosophy of energy that cuts across a number of leading edge disciplines Drawing from contemporary philosophies of New Materialism non Western traditions and the sciences he develops a comprehensive vision of energy as a material process spanning physics biology politics ecology and religion Crockett argues that change is foundational to material reality which is ceaselessly self organizing We can observe energy's effects in the operations of natural selection as well as those at work in human societies Matter and energy are not an oppositional binary rather they are expressions of how change functions in the universe Ultimately Crockett argues we can conceive of God neither as a deity nor as a being but as the principle of change Informed by cutting edge theoretical discourses in thermodynamics science studies energy humanities systems theory continental philosophy and radical theology *Energy and Change* draws on theorists such as Gilles Deleuze Catherine Malabou Slavoj Žižek Karen Barad Bruno Latour and Kojin Karatani as well as ideas about spirituality society and nature from Amerindian Vodou and Neo Confucian traditions A foundational work in New Materialist philosophy of religion this book offers compelling new insights into the structure of the cosmos and our place in it

Planet Work Ryan Hediger, 2022-12-09 Labor and labor norms orient much of contemporary life organizing our days and years and driving planetary environmental change Yet labor as a foundational set of values and practices has not been sufficiently interrogated in the context of the environmental humanities for its profound role in climate change and other crises This collection of essays demonstrates the urgent need to rethink models and customs of labor and leisure in the Anthropocene Recognizing the grave traumas and hazards plaguing planet Earth contributors expose fundamental flaws in ideas of work and search for ways to redirect cultures toward more sustainable modes of life These essays evaluate Anthropocene frames of interpretation dramatize

problems and potentials in regimes of labor and explore leisure practices such as walking and storytelling as modes of recasting life while a coda advocates reviving notions of work as craft
