Fault Detection and Diagnosis Constantin Volosencu, 2018-11-07 This book offers a selection of papers in the field of fault
detection and diagnosis promoting new research results in the field which come to join other publications in the literature
Authors from countries of four continents United States of America South Africa China India Algeria and Croatia published
worked examples and case studies resulting from their research in the field Fault detection and diagnosis has a great
importance in all industrial processes to assure the monitoring maintenance and repair of the complex processes including
all hardware firmware and software The book has four sections determined by the application domain and the methods used
1 Hybrid Computing Systems 2 Power Systems 3 Power Electronics and 4 Kalman Filtering In the first section the readers
will find a technical report on fault diagnosis of hybrid computing systems based on the chaotic map method that uses the
exponential divergence and wide Fourier properties of the trajectories combined with memory allocations and assignments In
the second section two chapters are included one of them presents a study on preventive maintenance and fault detection for
wind turbine generators using statistical models and the second chapter presents a technical report on fault diagnosis for
turbo generators based on the mechanical electrical intersectional characteristics The third section contains a technical
report that presents some techniques of detection and localization of open circuit faults in a three phase voltage source
inverter fed induction motor The fourth section presents a theoretical study on the application of distributed discrete time
linear Kalman filtering with decentralized structure of sensors in fault residual generation
