Mobile and Rapidly Assembled Structures IV N. De Temmerman, C. A. Brebbia, 2014-06-11 Structures that move in the course of normal use or which have to be assembled or erected rapidly on a relatively unprepared site offer a particular challenge to the designer The interaction between the structure and the mechanism by which it moves is essential in these cases The speed of assembly what this means in terms of logistics materials and cost is a major factor in many such structures Mobile and rapidly assembled structures play a major role in disaster mitigation and temporary accommodation They are of primary importance in many military as well as civilian applications and are widely used for rescue and maintenance services Their importance continues to grow in contemporary society where speed of response is of primary importance Also in many cases their reversible deployment and potential reuse can lead to a lower economical and or ecological impact providing a more sustainable solution There are common problems such as the efficient design of

assembly joints the resistance to damage of the membrane and metal cladding crashworthiness and the limits of serviceability Some areas of the subject are already well documented but knowledge is fragmented and there is little design guidance available in the form of textbooks data sheets or codes of practice The interaction between morphology kinematic behaviour and structural performance typical for these structures poses real challenges in terms of design and successful realisation This multi disciplinary proceedings volume contains papers presented at the fourth International Conference on Mobile Adaptable and Rapidly Assembled Structures Topics covered include Rapidly erected bridges and transportable bridges Disaster mitigation structures Temporary structures and dwellings Deployable systems and structural mechanisms Tensegrity and reciprocal frames Origami based structures Inflated and air supported structures and membrane shelters Rapidly assembled kit of parts systems Leisure structures demountable grandstands and scaffolding systems Mobile inspection platforms Folding and telescopic masts and gangways Tower cranes and mobile lifting apparatus Trackways and prefabricated paving for roads and airfields Protective structures Rapid repairs of structures Structures in adverse conditions Spacecraft structures Construction and repair
