Science Experiments Compare:

An International Comparison of Science Teaching and Learning. Further Results from PISA 2006 Mareike

Kobarg, Manfred Prenzel, Tina Seidel, 2011 The OECD Programme for International Student Assessment PISA assesses the competencies of 15 year old students around the world In 2006 the PISA report focused on the science competencies 15 year old students developed The report does not reflect a systematic consideration of science learning environments in schools and their relationship to cognitive and motivational outcomes in terms of scientific literacy However in all investigated countries schools are where young people become familiar with science over an extended period of time Hence this book aims to provide detailed information on science teaching and learning in schools in the OECD countries Data from the PISA 2006 school principals and students questionnaires is used for the description of science teaching and learning First the context of science teaching in schools is described to provide a background for the analyses that follow Then the book draws a detailed picture of different components of science teaching relevant for student learning In addition international patterns of science teaching and learning are investigated The investigation focuses on the teaching of scientific enquiry This focus is chosen because the process of scientific enquiry models the way in which researchers think and it provides students with ample opportunities to develop science literacy Further investigations include the effects of different patterns of science teaching on student literacy The book concludes with implications for policy and practice

Science Vs. Religion Elaine Howard Ecklund, 2010-05-06 That the longstanding antagonism between science and religion is irreconcilable has been taken for granted And in the wake of recent controversies over teaching intelligent design and the ethics of stem cell research the divide seems as unbridgeable as ever In Science vs Religion Elaine Howard Ecklund investigates this unexamined assumption in the first systematic study of what scientists actually think and feel about religion In the course of her research Ecklund surveyed nearly 1 700 scientists and interviewed 275 of them She finds that most of what we believe about the faith lives of elite scientists is wrong Nearly 50 percent of them are religious Many others are what she calls spiritual entrepreneurs seeking creative ways to work with the tensions between science and faith outside the constraints of traditional religion The book centers around vivid portraits of 10 representative men and women working in the natural and social sciences at top American research universities Ecklund's respondents run the gamut from Margaret a chemist who teaches a Sunday school class to Arik a physicist who chose not to believe in God well before he decided to become a scientist Only a small minority are actively hostile to religion Ecklund reveals how scientists believers and skeptics alike are struggling to engage the increasing number of religious students in their classrooms and argues that many scientists are searching for boundary pioneers to cross the picket lines separating science and religion With broad implications for education science funding and the thorny ethical questions surrounding stem cell research cloning and other cutting edge scientific endeavors Science vs Religion brings a welcome dose of reality to the science and religion debates

James Vs Darwin Frederick Bauer,2009-08-26 James yearned to weave science and religion into a popular philosophy useful for the everyday life of everyday people of faith He saw that many of them were defenseless in an increasingly agnostic even atheistic culture Thousands of innocent magazine readers lie paralyzed and terrified in the network of shallow negations which the leaders of opinion have thrown over their souls he wrote in 1882 To which he added If I like the mouse in the fable have gnawed a few of the strings of the sophistical net that has been binding down the human heart s lion strength I shall be more than rewarded for my pains Were he to

return he would surely be even more unhappy with the leaders of opinion but also with the responses of people of faith who either seek refuge in untenable fundamentalist reliance on religious scriptures or else view science and religion as two wholly separate independent spheres of knowledge Building on three previous books about James's philosophy as well as on three books about related topics the present text will explain why no one professing to do science in this third millennium can ignore the psychology behind all discoveries Dietary Starches and Sugars in Man: A Comparison John
