The Humachine Nada R. Sanders, John D. Wood, 2019-09-09 There is a lot of hype hand waving and ink being spilled about artificial intelligence AI in business The amount of coverage of this topic in the trade press and on shareholder calls is evidence of a large change currently underway It is awesome and terrifying You might think of AI as a major environmental factor that is creating an evolutionary pressure that will force enterprise to evolve or perish For those companies that do survive the silicon wave sweeping through the global economy the issue becomes how to keep their humanity amidst the tumult What started as an inquiry into how executives can adopt AI to harness the best of human and machine capabilities turned into a much more profound rumination on the future of humanity and enterprise This is a wake up call for business leaders across all sectors of the economy Not only should you implement AI regardless of your industry but once you do you should fight to stay true to your purpose your ethical convictions indeed your humanity even as our organizations continue to evolve While not holding any punches about the dangers posed by overpowered AI this book uniquely surveys where technology is limited and gives reason for cautious optimism about the true opportunities that lie amidst all the disruptive change currently underway As such it is distinctively more optimistic than many of the competing titles on Big Technology This compelling book weaves together business strategy and philosophy of mind behavioral psychology and the limits of technology leadership and law The authors set out to identify where humans and machines can best complement one another to create an enterprise greater than the sum total of its parts the Humachine Combining the global business and forecasting acumen of Professor Nada R Sanders PhD with the legal and philosophical insight of John D Wood Esq the authors combine their strengths to bring us this profound yet accessible book This is a must read for anyone interested in AI and the future of human enterprise

Conference, Ziad Kobti, 2007-05-10 This book constitutes the refereed proceedings of the 20th Conference of the Canadian Society for Computational Studies of Intelligence Canadian AI 2007 held in Montreal Canada in May 2007 The 46 revised full papers cover agents bioinformatics classification constraint satisfaction data mining knowledge representation and reasoning learning natural language and planning Artificial Intelligence and the Future of Healthcare Jon-Arild

Johannessen, 2024-07-19 The application of Artificial Intelligence AI in the healthcare sector is certain to boost levels of automation and productivity but paradoxically it will also increase the availability of first line competence At the same time as demographic trends are affecting demand for health and social care the technological developments we are seeing make it highly likely that AI will play a decisive role in tackling the challenges our healthcare systems will encounter This book reveals systemic connections to tackle questions about the potential impact of AI on future challenges in the healthcare sector Specifically it develops practical proposals for ways in which AI can be applied to solve these forthcoming issues It

emphasizes the importance of AI in what is known in the literature as human augmentation. The book's innovative perspective is apparent in the way it challenges conventional wisdom in the context of several pressing questions such as: What opportunities and challenges could arise from the application of AI in the healthcare sector? How can the philosophy of medicine viewed from a systemic perspective help us to understand, explain, and resolve some of the future challenges in the healthcare sector? How could AI affect inclusive employment opportunities for people with disabilities? The book also contains an underlying argument to the effect that the rational approach adopted by economists is perhaps less rational when applied to a healthcare sector that is crying out for more first-line competence. The primary readership will be academic, but the book will also appeal to policymakers, consultants, HR departments, healthcare stakeholders, and related practitioners.

Teaching and Learning in the Age of Generative AI Joseph Rene Corbeil, Maria Elena Corbeil, 2025-04-30

Teaching and Learning in the Age of Generative AI explores how educators can effectively harness the potential of artificial intelligence technologies while skillfully navigating its pedagogical, technical, ethical, institutional, and societal implications. The increasing accessibility of AI technologies among K-12 and higher education students has raised extensive concerns around academic integrity, though a deeper lineage of research and development suggests that these tools may be used to supplement instruction, prioritize critical thinking, and promote digital literacy. Bookended by in-depth analyses of the historical and future trajectories of artificial intelligence in education, this comprehensive resource provides evidence-based strategies for classroom implementation and helpful summaries of common benefits and risks. Teaching assistance, personalized learning, redefined assessments, anti-bias measures, and safeguards against misconduct and privacy infringement are among the wealth of topics addressed in these chapters. This book is an ideal text for undergraduate and graduate students of teacher education and curriculum and instruction, as well as for higher education teaching faculty, school technology coordinators, and talent development personnel in training and in service.
