industry that recognizes lessons learned from the past impacts being felt today and future disruptions that many see coming sooner rather than later It s also a macro and micro economic journey that most futurist and forward thinkers will tell you is not going to be a pleasant one starting around the year 2030 but one that most everyone living today in the U S as well as communities and cultures around the world will be taking in one form or another whether they like it or not as they go about their day Viewed as a microcosm of the entire U S economy the 1 2 trillion construction industry is not immune from the myriad of social cultural political and technological changes being forecasted on the horizon as demographic shifts impact how individuals will live and work It is also one of very few sectors of the U S economy that is most representative of the country s social diversity and whose labor force represents the cross section of a multi cultural fabric and like most sectors of the U S economy starting around the year 2030 construction is an industry that will start to see dramatic shifts in how it goes about meeting the future demand of its customers Shifts that will require a massive overhaul in how the industry simultaneously grapples to manage market and deliver its goods and services through ever advancing technologies 1 The National Electrical Contractor ,1940 **Jab's Con\$truction, Co\$t Escalation, Engineering and Management, Cpm**
