Hierarchical Object Representations in the Visual Cortex and Computer Vision Antonio Rodríguez-Sánchez, Mazyar Fallah, Ales Leonardis, 2016-06-08 Over the past 40 years neurobiology and computational neuroscience has proved that deeper understanding of visual processes in humans and non human primates can lead to important advancements in computational perception theories and systems One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize or simply find an object when faced with all the possible variations that may occur in a natural scene with the ease of the primate visual system The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex The visual cortex performs a wide variety of complex tasks by means of simple operations These seemingly simple operations are applied to several layers of neurons organized into a hierarchy the layers representing increasingly complex abstract intermediate processing stages In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1 To understand how the visual cortex encodes an object from a starting point where neurons respond to lines bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination size location viewpoint rotation and robust to occlusions and clutter and 2 How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy efficiency and robustness to variations Applied Informatics Hector Florez, Cesar Diaz, Jaime Chavarriaga, 2018-10-24 This book constitutes the thoroughly refereed papers of the First International Conference on Applied Informatics ICAI 2018 held in Bogot Colombia in November 2018 The 27 full papers were carefully reviewed and selected from 81 submissions The papers are organized in topical sections on data analysis decision systems health care information systems IT architectures learning management systems mobile information processing systems robotic autonomy software design engineering Robotics, Computer Vision and Intelligent Systems Péter Galambos, Erdal Kayacan, Kurosh Madani, 2022-11-09 This volume constitutes the papers of two workshops which were held in conjunction with the First International Conference on Robotics Computer Vision and Intelligent Systems ROBOVIS 2020 Virtual Event in November 4 6 2020 and Second International Conference on Robotics Computer Vision and Intelligent Systems ROBOVIS 2021 Virtual Event in October 25 27 2021 The 11 revised full papers presented in this book were carefully reviewed and selected from 53 submissions Deep Learning and Neural Networks: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2019-10-11 Due to the growing use of web applications and communication devices the use of data has increased throughout various industries It is necessary to develop new techniques for managing data in order to ensure adequate usage Deep learning a subset of artificial intelligence and machine learning has been recognized in various real world applications such as computer vision image processing and pattern recognition The deep learning approach has opened new opportunities that can make such real life applications and tasks easier and more efficient Deep Learning and Neural Networks Concepts
