Nerve Repair Nerve Repair:

Nerve Repair Thomas M. Brushart, 2011-02-15 *Nerve Repair* is a historically based translational review of the clinical and basic science relevant to nerve repair and regeneration Essential reading for a wide range of professionals it summarizes pertinent research for the clinician and the clinical aspects of nerve repair for the scientist *Modern Concepts of Peripheral Nerve Repair* Kirsten Haastert-Talini, Hans Assmus, Gregor Antoniadis, 2017-06-19 This book focuses on posttraumatic repair and reconstruction of peripheral nerves Written by internationally respected specialists it provides an overview of the challenges and the latest advances in diagnosis and treatment of traumatic peripheral nerve injuries It presents an outline of state of the art procedures from diagnostics including newest imaging techniques over conventional and alternative surgical approaches to clinical follow up and rehabilitation including the latest concepts to improve functional recovery The purely clinical topics are preceded by neuroanatomical principles and neurobiological events related to peripheral nerve transection injuries and followed by an outlook on current experimental developments in the area of biomaterials for artificial nerve grafts and peripheral nerve tissue engineering Peripheral nerve injuries not only affect the nerve tissue at the site of injury but also target tissue and parts of the central nervous system They often have dramatic consequences for patients including loss of sensory and motor functions combined with paresthesia or pain and a reduced quality of life and ability to work An adequate understanding of the procedures for proper decision making and reconstructing peripheral nerves is therefore essential to ensure optimized functional recovery *Essays on Peripheral Nerve Repair and Regeneration* Stefano Geuna, Pierluigi Tos, Bruno Battiston, 2009-08-10 Interest in the study of peripheral nerve repair and regeneration has increased significantly over the last twenty years and today the number of nerve reconstructions performed is progressively increasing due to the continuous improvement in surgical technology and to the spread of microsurgical skills among surgeons worldwide This volume of International Review of Neurobiology provides an overview of the state of the art knowledge in peripheral nerve repair and regeneration by bringing together a number of reviews that critically address some the most important issues in this biomedical field **Peripheral Nerve Regeneration** Ana Colette Maurício, 2017-05-31 Peripheral nerve injuries are a high incidence clinical problem that greatly affects patients quality of life Despite continuous refinement of microsurgery techniques peripheral nerve repair still stands as one of the most challenging tasks in neurosurgery as functional neuromuscular recovery is rarely satisfactory in these patients Therefore the improvement of surgical techniques and the clinical application of innovative therapies have been intensively studied worldwide Direct nerve repair with epineural end to end sutures is still the gold standard treatment for severe neurotmesis injuries but only in cases where well vascularized tension free coaptation can be achieved When peripheral nerve injury originates a significant gap between the nerve stumps nerve grafts are required with several associated disadvantages Therefore the development of scaffolds by tissue engineering can provide efficient treatment alternatives to

stimulate optimum clinical outcome Nerve conduit tailoring involves reaching ideal wall pores using electrospinning techniques in their fabrication surface coating with extracellular matrix materials and adding of growth factors or cell based therapies among other possibilities Also intraluminal cues are employed such as the filling with hydrogels inner surface modification topographical design and the introduction of neurotrophic factors antibiotics anti inflammatories and other pharmacological agents A comprehensive state of the art of surgical techniques tissue engineered nerve graft scaffolds and their application in nerve regeneration the advances in peripheral nerve repair and future perspectives will be discussed including surgeons and researchers own large experience in this field of knowledge
