Neuroconstructivism - I Denis Mareschal,Mark H. Johnson,Sylvain Sirois,Michael Spratling,Michael S. C. Thomas,Gert Westermann,2007-01-18 What are the processes from conception to adulthood that enable a single cell to grow into a sentient adult The processes that occur along the way are so complex that any attempt to understand development necessitates a multi disciplinary approach integrating data from cognitive studies computational work and neuroimaging an approach till now seldom taken in the study of child development Neuroconstructivism is a major new 2 volume publication that seeks to redress this balance presenting an integrative new framework for considering development In the first volume the authors review up to to date findings from neurobiology brain imaging child development computer and robotic modelling to consider why children s thinking develops the way it does They propose a new synthesis of development that is based on 5 key principles found to operate at many levels of descriptions They use these principles to explain what causes a number of key developmental phenomena including infants interacting with objects early social cognitive interactions and the causes of dyslexia The neuroconstructivist framework also shows how developmental disorders do not arise from selective damage to the normal cognitive system but instead arise from developmental processes that operate under atypical constraints How these principles work is illustrated in several case studies ranging from perceptual to social and reading development Finally the authors use neuroimaging behavioural analyses computational simulations and robotic models to provide a way of understanding the mechanisms and processes that cause development to occur *Handbook of Integrative Developmental Science* Michael F. Mascolo,Thomas R. Bidell,2020-03-20 Although integrative conceptions of development have been gaining increasing interest there have been few attempts to bring together the various threads of this emerging trend The Handbook of Integrative Developmental Science seeks ways to bring together classic and contemporary theory and research in developmental psychology with an eye toward building increasingly integrated theoretical and empirical frameworks It does so in the form of a festschrift for Kurt Fischer whose life and work have both inspired and exemplified integrative approaches to development Building upon and inspired by the comprehensive scope of Fischer s Dynamic Skill Theory this book examines what an integrated theory of psychological development might look like Bringing together the work of prominent integrative thinkers the volume begins with an examination of philosophical presuppositions of integrative approaches to development It then shows how Dynamic Skill Theory provides an example of an integrative model of development After examining the question of the nature of integrative developmental methodology the volume examines the

nature of developmental change processes as well as pathways and processes in the development of psychological structures both within and between psychological domains The team of expert contributors cover a range of psychological domains including the macro and micro development of thought feeling motivation self intersubjectivity social relations personality and other integrative processes It ends with a set of prescriptions for the further elaboration of integrative developmental theory and a tribute to Kurt Fischer and his influence on developmental psychology This book will be essential reading for graduate students and researchers of developmental psychology and human development specifically developmental science
