

10 PRINCIPLES OF NEUROPLASTICITY

Neuroplasticity is the brain's remarkable ability to form new pathways and strengthen connections – even following injury. Use these principles to make the most of your rehabilitation and create positive changes in your brain.

USE IT OR LOSE IT

Every thought, action, movement, and skill has a specific set of connections in your brain. When you don't practice something for an extended period of time, the pathways for that task start to weaken, and they get weaker over time.

USE IT & IMPROVE IT

However, if you practice something a lot, these connections can grow and become stronger. Training a thought or a behavior (and doing it regularly) can lead to improved speed and performance.

SALIENCE

Emotions can affect the strength of memory consolidation. If therapy is made interesting or important to you (ex: incorporating hobbies or interests), you can more easily remember new skills or pieces of information.

REPETITION

Repetition of a learned (or re-learned) behavior is required for long-term changes in the brain. You need thousands of repetitions to master a skill. The more time you've spent practicing, the better you perform.

INTENSITY

If you do something that doesn't challenge you, you won't see much of a difference. Intensity can be the number of times you do an exercise or how difficult it is. Try to find an intensity that is one step above your current level.

SPECIFICITY

You have to train your brain in very specific ways. Learning something new or re-training an old skill (rather than going through the motions of something you already know) helps increase connections in the brain.

AGE

Our brains are the most flexible and adaptive when we are young. But brains can grow and change at any age! Effects are generally better in individuals with greater physical and mental activity.

TIME

If therapy targets changing, increasing, and strengthening the pathways in your brain (using these principles), it should work any time. However, there may be windows of time where progress happens at a faster rate.

TRANSFERENCE

Learning in one situation (like therapy) can generalize to other situations (like social settings). Similarly, training one specific skill can sometimes activate the pathways of nearby, untrained items and improve those skills as well.

INTERFERENCE

Neuroplasticity means the brain is always learning. But it doesn't know the difference between good and bad. Maladaptive habits or practicing the wrong things might interfere with the changes you want to make.

Neuroplasticity And Rehabilitation:

Neuroplasticity and Rehabilitation Sarah A. Raskin, 2011-08-08 Brain plasticity is the focus of a growing body of research with significant implications for neurorehabilitation This state of the art volume explores ways in which brain injured individuals may be helped not only to compensate for their loss of cognitive abilities but also possibly to restore those abilities Expert contributors examine the extent to which damaged cortical regions can actually recover and resume previous functions as well as how intact regions are recruited to take on tasks once mediated by the damaged region Evidence based rehabilitation approaches are reviewed for a range of impairments and clinical populations including both children and adults

Cognitive Rehabilitation McKay Moore Sohlberg, Catherine A. Mateer, 2001-05-25 This volume offers a comprehensive overview of this fast evolving field More than a revised edition the text reflects recent developments in neuroscience and computer technology coupled with changing service delivery models Authoritative and up to date it is an indispensable resource for anyone working with individuals with acquired cognitive impairments This volume belongs on the desks of professionals across a wide variety of rehabilitation specialties including neuropsychology clinical and cognitive psychology psychiatry speech language pathology occupational therapy neurology and rehabilitation medicine For student use the book will replace its predecessor as a key text in courses on rehabilitation methods and neurogenic disorders *Neural Plasticity in Rehabilitation and Psychotherapy* Wolfgang H. R. Miltner, Otto W. Witte, 2016 The brain continuously adapts its structures and functions to changes in its environment in a process called neural plasticity Research indicates that psychotherapy and rehabilitation are only effective when they induce such neural plasticity Here leading experts discuss the most recent research on training and therapy induced brain plasticity **Physical Management in Neurological**

Rehabilitation Maria Stokes, 2004 Building upon the success of the first edition of this popular book the new edition of *Physical Management in Neurological Rehabilitation* has been completely updated and revised to reflect changes in practice today The authors consider the theoretical basis and scientific evidence of effective treatment taking a multidisciplinary problem solving approach to patient management which involves patients and carers in goal setting and decision making
