Tax Bracket Google Maps Review:

Embodying Data Qi Li, 2020-06-19 This book investigates a new interactive data visualisation concept that employs traditional Chinese aesthetics as a basis for exploring contemporary digital technological contexts It outlines the aesthetic approach which draws on non Western aesthetic concepts specifically the Yijing and Taoist cosmological principles and discusses the development of data based digital practices within a theoretical framework that combines traditional Taoist ideas with the digital humanities The book also offers a critique of the Western aesthetics underpinning data visualisation in particular the Kantian sublime which prioritises the experience of power over the natural world viewed at a distance Taoist philosophy in contrast highlights the integration of the surface of the body and the surface of nature as a Taoist body rather than promoting an opposition of mind and body The book then explores the transformational potential between the human body and technology particularly in creating an aesthetic approach spanning traditional Chinese aesthetics and gesture based technology Representing a valuable contribution to the digital humanities the book helps readers understand data based artistic practices while also bringing the ideas of traditional Chinese aesthetics to Western audiences In addition it will be of interest to practitioners in the fields of digital art and data visualisation seeking new models

Without a Map Andrei Shleifer, Daniel Treisman, 2001-08-24 A balanced look at Russia's attempts to build capitalism on the ruins of Soviet central planning Recent commentators on Russia's economic reforms have almost uniformly declared them a disappointing and avoidable failure In this book two American scholars take a new and more balanced look at the country's attempts to build capitalism on the ruins of Soviet central planning They show how and why the Russian reforms achieved remarkable breakthroughs in some areas but came undone in others Unlike Eastern European countries such as Poland or the Czech Republic to which it is often compared Russia is a federal ethnically diverse industrial giant with an economy heavily oriented toward raw materials extraction The political obstacles it faced in designing reforms were incomparably greater Shleifer and Treisman tell how Russia's leaders navigating in uncharted economic terrain managed to find a path around some of these obstacles In successful episodes central reformers devised a strategy to win over some key opponents while dividing and marginalizing others Such political tactics made possible the rapid privatization of 14 000 state enterprises in 1992 1994 and the defeat of inflation in 1995 But failure to outmaneuver the new oligarchs and regional governors after 1996 undermined reformers' attempts to collect taxes and clean up the bureaucracy that has stifled business growth Renewing a strain of analysis that runs from Machiavelli to Hirschman the authors reach conclusions about political strategies that have important implications for other reformers They draw on their extensive knowledge of the country and
