Essential Skills in Mathematics John A. Dossey, Lois Peak, Dawn D. Nelson, 1997 This document is a comparative report based on data that enables a different form of comparison to be made between Japanese and American eighth graders The data is drawn from assessments given in each country using tests developed via governmental agencies that were designed to mirror the basic curricula currently being offered to students in the two countries This report compares the nature of these examinations the expectations based on the curriculum and student performance on the test items This comparison combined with an accompanying analysis of the curricular emphases provides a picture of the differences in student performance that mark this study Each of the studies examined content achievement assessments students and teachers beliefs and attitudes and environmental characteristics of the classroom school and community The Japanese test items tend to present the mathematics assessed in forms that are more verbally intensive more focused on strategies for problem solving and more involved than the mathematics forms used in the National Assessment of Educational Progress Sample test items a content matrix for the U S test and the framework for the Japanese test are included Contains 29 references DDR

Nonautonomous Linear Hamiltonian Systems: Oscillation, Spectral Theory and Control Russell Johnson, Rafael Obaya, Sylvia Novo, Carmen Núñez, Roberta Fabbri, 2016-03-25 This monograph contains an in depth analysis of the dynamics given by a linear Hamiltonian system of general dimension with nonautonomous bounded and uniformly continuous coefficients without other initial assumptions on time recurrence Particular attention is given to the oscillation properties of the solutions as well as to a spectral theory appropriate for such systems The book contains extensions of results which are well known when the coefficients are autonomous or periodic as well as in the nonautonomous two dimensional case However a substantial part of the theory presented here is new even in those much simpler situations The authors make systematic use of basic facts concerning Lagrange planes and symplectic matrices and apply some fundamental methods of topological dynamics and ergodic theory Among the tools used in the analysis which include Lyapunov exponents Weyl matrices exponential dichotomy and weak disconjugacy a fundamental role is played by the rotation number for linear Hamiltonian systems of general dimension The properties of all these objects form the basis for the study of several themes concerning linear quadratic control problems including the linear regulator property the Kalman Bucy filter the infinite

Photoinduced Molecular Dynamics in Solution Gianluca Levi, 2019-09-03 This book explores novel computational strategies for simulating excess energy dissipation alongside transient structural changes in photoexcited molecules and accompanying solvent rearrangements It also demonstrates in detail the synergy between theoretical modelling and ultrafast experiments in unravelling various aspects of the reaction dynamics of solvated photocatalytic metal complexes Transition metal complexes play an important role as photocatalysts in solar energy conversion and the rational design of metal based photocatalytic systems with improved efficiency hinges on the fundamental understanding of the mechanisms behind light induced chemical reactions in solution Theory and atomistic modelling hold the key to uncovering these ultrafast processes Linking atomistic simulations and modern X ray scattering experiments with femtosecond time resolution the book highlights previously unexplored dynamical changes in molecules and discusses the development of theoretical and computational frameworks capable of interpreting the underlying ultrafast phenomena *Glaucoma E-Book* Tarek M.
