Entomopathogenic Nematodes as Biological Control Agents David I. Shapiro-Ilan, Edwin E. Lewis, 2024-09-23

Entomopathogenic nematodes EPNs are biocontrol agents that are used to control a wide variety of insect pests within agriculture and forestry In addition to their use as bio pesticides EPNs have a fascinating biology and are thus considered model organisms in ecology symbiosis and pathogenesis This book presents basic knowledge and diverse applications to illustrate how EPNs play an important role as potent biocontrol solutions This book is a must have for all pest management professionals including those practicing integrated pest management strategies **Nematodes as Biocontrol Agents**

Grant Stark, 2023 **Biocontrol Agents**, 2017 *Fungi As Biocontrol Agents* T. M. Butt, C. Jackson, N. Magan, 2001 There is increasing interest in the use of fungi for the control of pests weeds and diseases This book brings together perspectives from pathology ecology genetics physiology production technology to address the use of fungi as biological control agents

Biocontrol Agents Mahfouz M M Abd-Elgawad, Tarique Hassan Askary, James Coupland, 2017-07-12 This book describes entomopathogenic and slug parasitic nematodes as potential biocontrol agents in crop insect and slug pest management Addressing research on these two nematodes from tropical subtropical and temperate countries it covers the new techniques and major developments regarding mass production formulation application commercialization and safety measures Plans for future strategies to make these beneficial nematodes cost effective and expand their use by including them in integrated pest management programmes in different agro ecosystems are also discussed Biocontrol Agents Entomopathogenic and Slug Parasitic Nematodes provides a comprehensive review of the topic and is an essential resource for researchers industry

practitioners and advanced students in the fields of biological control and integrated pest management Biocontrol Agents of Phytonematodes Tarique Hassan Askary,P R P Martinelli,2015-06-29 Highlighting the use of biocontrol agents as an alternative to chemical pesticides in the management of plant parasitic nematodes this book reviews the current progress and developments in the field Tactful and successful exploitation of each biocontrol agent i e nematophagous fungi parasitic bacteria predaceous mites rhizobacteria mycorrhiza and predaceous nematodes has been described separately The contributors are 23 eminent nematologists and their information has been compiled in 19 chapters Nematodes and the Biological Control of Insect Pests RA Bedding,RJ Akhurst,HK Kaya,1993-01-01 Environmental and public health problems arising from the use of chemical insecticides have led to an increasing demand for alternatives for insect pest control Together with this widespread public concern resulting in governmental bans on many of the most effective insecticides and development of insecticide resistance has severely reduced the range of useful insecticides available Alternative control measures such as the biological control of pest insects with parasitoids and predators and microbial biocides have been in field use for several decades Although these alternatives are being continually improved most insect pests are nonetheless still controlled with chemical insecticides This book presents the latest work on the biological control of insects using nematodes it covers a range of topics that will help provide a better understanding of the potential problems involved in developing these nematodes as biological control agents Nematodes infect hundreds of different species from most orders of insects and affect their insect hosts in a variety of ways **Integrated Management and Biocontrol of Vegetable and Grain Crops Nematodes** A. Ciancio,K.G. Mukerji,2007-12-08 The second volume of the IMPD series describes aspects related to the most important phytoparasitic nematodes considering the integration of biological control methods with other management practices and technologies including the use of predatory nematodes and microbial rhizosphere antagonists A focus is given on regional issues A review on nematode management in cotton is integrated by a chapter on management of nematodes on wheat New technologies are also revised Biocontrol Agents of Phytonematodes Tarique Hassan Askary,Paulo Roberto Pala Martinelli,2015 Highlighting the use of biocontrol agents as an alternative to chemical pesticides in the management of plant parasitic nematodes this book reviews the current progress and developments in the field Tactful and successful exploitation of each biocontrol agent i e nematophagous fungi parasitic bacteria predaceous mites rhizobacteria mycorrhiza and predaceous nematodes has been described separately The contributors are 23 eminent nematologists and their information has been compiled in 19 chapters *Biological Control of Plant-Parasitic Nematodes:* Keith Davies,Yitzhak Spiegel,2011-06-27 The offered volume intends to review the biological control theme of phytonematodes from several prospects ecological applicative as well as commercial state of the art understanding the mode of action of various biocontrol systems interaction between the plant host nematodes surface and microorganism s candidates for biocontrol extrapolation of the wide knowledge existed in another systems for understanding biocontrol

processes *C. elegans* as a model and lessons from other natural systems and exploiting advanced genomic tools to promote understanding biocontrol processes and thereafter improve specific biological control agents

Nematode Pathogenesis of Insects and Other Pests Raquel Campos-Herrera, 2015-08-11 Achieving a sustainable agriculture requires integrating advances in multiple disciplines covering both fundamental and applied research in a common objective enhancing crop health for better productions This first volume of the Series Sustainability in plant and crop protection presents a comprehensive and multi disciplinary compendium about the recent achievements in the use of entomopathogenic nematodes EPNs as biological control in a global scale The volume is organized in a first section discussing the last discoveries on the biology and ecology of the EPN a second section covering the advances on the EPN productions and release and a third section with multiple case studies in which the concepts and ideas on the two previous sections are integrated and discussed An essential tool for researchers and professionals working to advance in the sustainable use of our resources

Interaction Between Nematodes and Biocontrol Agents with Potential for Use in Biomangement Systems

Pedro Mendoza de Gives, 1999

Field Manual of Techniques in Invertebrate Pathology Lawrence A. Lacey, Harry K. Kaya, 2007-10-04 The basic tools include chapters on the theory and practice of application of microbial control agents MCAs Section I statistical considerations in the design of experiments Section II and three chapters on application equipment and strategies Section III Section IV includes individual chapters on the major pathogen groups virus bacteria microsporidia fungi and nematodes and special considerations for their evaluation under field conditions This section sets the stage for subsequent chapters on the impact of naturally occurring and introduced exotic pathogens and inundative application of MCAs Twenty three chapters on the application and evaluation of MCAs in a wide variety of agricultural forest domestic and aquatic habitats comprise Section VII of the Field Manual In addition to insect pests the inclusion of mites and slugs broadens the scope of the book

Nematode Management in Plants P.C. Trivedi, 2003-07-01 Nematodes represent a unique challenge to agricultural research in that they combine the potential for serious reductions in growth and yield in a wide range of crop plants often with rather non specific and easily mis diagnosed symptoms Development of the concept of pest management and their implementation have led to a greater appreciation of the need for a wide range of tactics for nematode control The present book Nematode Management in Plants provides an authoritative review of many aspects of nematode control and progress in the field of nematode management programme The volume contains eighteen articles covering application of cropping sequences plant products and botanicals latex bioagents and biological control practices for the management of nematode pests Topics covering use of *Azotobacter* *Bacillus thuringiensis* and VAM Fungi for reducing nematode pests have been specially included to project their role in the present century Information on Integrated Nematode Management have been included with special emphasis on biocontrol management practices This book will be useful to Plant Pathologist Nematologist research and extension workers teachers and students
