Motor Control Translating Research Into Clinical Practice:

Motor Control Anne Shumway-Cook, Marjorie H. Woollacott, 2007 *Motor Control* is the only text to bridge the gap between current motor control research and its applications to clinical practice. The text prepares therapists to examine and treat patients with problems related to balance mobility and upper extremity function based on the best available evidence supporting clinical practice. The Third Edition features a new two color design with an updated art program. This edition provides the latest research findings and their clinical applications in postural control mobility and upper extremity function. Drawings, charts, tables, and photographs are also included to clarify postural control and functional mobility and laboratory activities and case studies are provided to reinforce key concepts. *Motor Control* Anne Shumway-Cook, Marjorie H. Woollacott, Jaya Rachwani, Victor Santamaria, 2023-04-05 *Motor Control Translating Research into Clinical Practice* 6th Edition is the only text that bridges the gap between current and emerging motor control research and its application to clinical practice. Written by leading experts in the field, this classic resource prepares users to effectively assess, evaluate, and treat clients with problems related to postural control mobility and upper extremity function using today's evidence-based best practices. This extensively revised 6th Edition reflects the latest advances in research and features updated images, clinical features, and case studies to ensure a confident transition to practice. Each chapter follows a consistent straightforward format to simplify studying and reinforce understanding of normal control process issues, age-related issues, research on abnormal function, clinical applications of current research, and evidence to support treatments used in the rehabilitation of patients with motor control problems. **Motor Control** Anne Shumway-Cook, Marjorie H. Online video case studies linked to the text examine motor control deficits in different types of neurologic pathology, including stroke, cerebellar pathology, cerebral palsy, multiple sclerosis, and Parkinson's disease, as well as in balance-impaired elders. Boxed Laboratory Activities give you hands-on practice in applying what you've learned. Answers appear at the end of the chapter. In-text learning aids, including Learning Objectives, point-by-point Summaries, and answers to Lab Activity Assignments, reinforce your understanding of key concepts. Extended Knowledge boxes provide in-depth material for more advanced students and practitioners. *Management of Spinal Cord Injuries* Lisa Harvey, 2008-01-10 Combining 25 years of clinical research and teaching experience, Dr. Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury.
