Motion Deblurring Algorithms And Systems:

Motion Deblurring A. N. Rajagopalan, Rama Chellappa, 2014 Motion Deblurring A. N. Rajagopalan, Rama Chellappa, 2014-05-08 A comprehensive guide to restoring images degraded by motion blur bridging the traditional approaches and emerging computational photography based techniques and bringing together a wide range of methods emerging from basic theory as well as cutting edge research It encompasses both algorithms and architectures providing detailed coverage of practical techniques by leading researchers From an algorithms perspective blind and non blind approaches are discussed including the use of single or multiple images projective motion blur model image priors and parametric models high dynamic range imaging in the irradiance domain and image recognition in blur Performance limits for motion deblurring cameras are also presented From a systems perspective hybrid frameworks combining low resolution high speed and high resolution low speed cameras are described along with the use of inertial sensors and coded exposure cameras Also covered is an architecture exploiting compressive sensing for video recovery A valuable resource for researchers and practitioners in computer vision image processing and related fields **Hochdurchsatz-Mikroskopie von Mikrotiterplatten auf Basis einer kontinuierlichen Objektbewegung** Friedrich Walter Schenk, 2016-11-11 Die Arbeit beschreibt ein Verfahren zu Hochdurchsatz Mikroskopie mit dem gro ße Objekte wie Mikrotiterplatten deutlich schneller als mit herkömmlichen Verfahren gescannt werden können ohne Einbu ßen der Bildqualität Dazu wird das Objekt während einer kontinuierlichen Bewegung digitalisiert wobei Bewegungsunschärfe durch eine Blitzbeleuchtung vermieden wird Dank eines neuartigen Hardware Autofokussystems bleibt das Objekt während des Scans zudem stets im Fokus A Survey of Blur Detection and Sharpness Assessment Methods Juan Andrade, 2022-06-01 Blurring is almost an omnipresent effect on natural images The main causes of blurring in images include a the existence of objects at different depths within the scene which is known as defocus blur b blurring due to motion either of objects in the scene or the imaging device and c blurring due to atmospheric turbulence Automatic estimation of spatially varying sharpness blurriness has several applications including depth estimation image quality assessment information retrieval image restoration among others There are some cases in which blur is intentionally introduced or enhanced for example in artistic photography and cinematography in which blur is intentionally introduced to emphasize a certain image region Bokeh is a technique that introduces defocus blur with aesthetic purposes Additionally in trending applications like augmented and virtual reality usually blur is introduced in order to provide enhanced depth perception Digital images and videos are produced every day in astonishing amounts and the demand for higher quality is constantly rising which creates a need for advanced image quality assessment Additionally image quality assessment is important for the performance of image processing algorithms It has been determined that image noise and artifacts can affect the performance of algorithms such as face detection and recognition image saliency detection and video target tracking Therefore image quality assessment IQA has been a topic of intense research in the fields

of image processing and computer vision Since humans are the end consumers of multimedia signals subjective quality metrics provide the most reliable results however their cost in addition to time requirements makes them unfeasible for practical applications Thus objective quality metrics are usually preferred *Proceedings of International Conference on Recent Innovations in Computing* Yashwant Singh, Pradeep Kumar Singh, Maheshkumar H.
