Critical Role of Animal Science Research in Food Security and Sustainability National Research Council,Division on Earth and Life Sciences,Board on Agriculture and Natural Resources,Policy and Global Affairs,Science and Technology for Sustainability Program,Committee on Considerations for the Future of Animal Science Research,2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion With globalization and expected growth in global affluence a substantial increase in per capita meat dairy and fish consumption is also anticipated The demand for calories from animal products will nearly double highlighting the critical importance of the world's animal agriculture system Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development technology and resource needs for research in the field of animal agriculture both nationally and internationally This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security evaluates how climate

change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems and identifies factors that may impact the ability of the United States to meet demand for animal products including the need for trained human capital product safety and quality and effective communication and adoption of new knowledge information and technologies The agricultural sector worldwide faces numerous daunting challenges that will require innovations new technologies and new ways of approaching agriculture if the food feed and fiber needs of the global population are to be met The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century

Systems Methodology in Social Science Research R. Cavallo, 2013-06-29 From the beginning the systems research movement has shown a high potential for offering a conceptual framework for the understanding of social systems Much of this potential has been realized but a major gap remains with regard to operational investigative aids Developments of the last ten years with a method ological orientation and emphasis seem finally to be filling this gap The purpose of this book is to describe the most advanced of these developments and to make them available to a wider audience The emphasis is on developments that are primarily oriented toward interaction with expertise in the social sciences and that thus hold the most promise for social systems investigation In particu lar attempts have been made to provide substantiation and illustration of three main points 1 the common motivation and essential integrability that systems research provides for developments and considerations along a very broad spec trum of interests 2 the very diverse nature of the types and forms of considera tions that may be meaningfully integrated and 3 the operational and usable nature that developments in systems methodology represent for research in the social sciences The book is divided into three parts with a generally increasing degree of specificity The first part Chapters 1 2 and 3 deals with foundational issues associated with modeling and methodology as areas worthy of study in their ix X PREFACE own right
